

# SOER 2020 and sustainability

State and Outlook for Europe's Environment Report 2020

FÖLDMŰVELÉSÜGYI  
MINISZTÉRIUM

European  
Environment  
Agency

19 April 2018

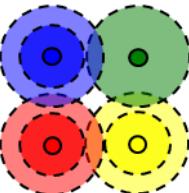

Miklós Marton

# SOER has a long history at the EEA

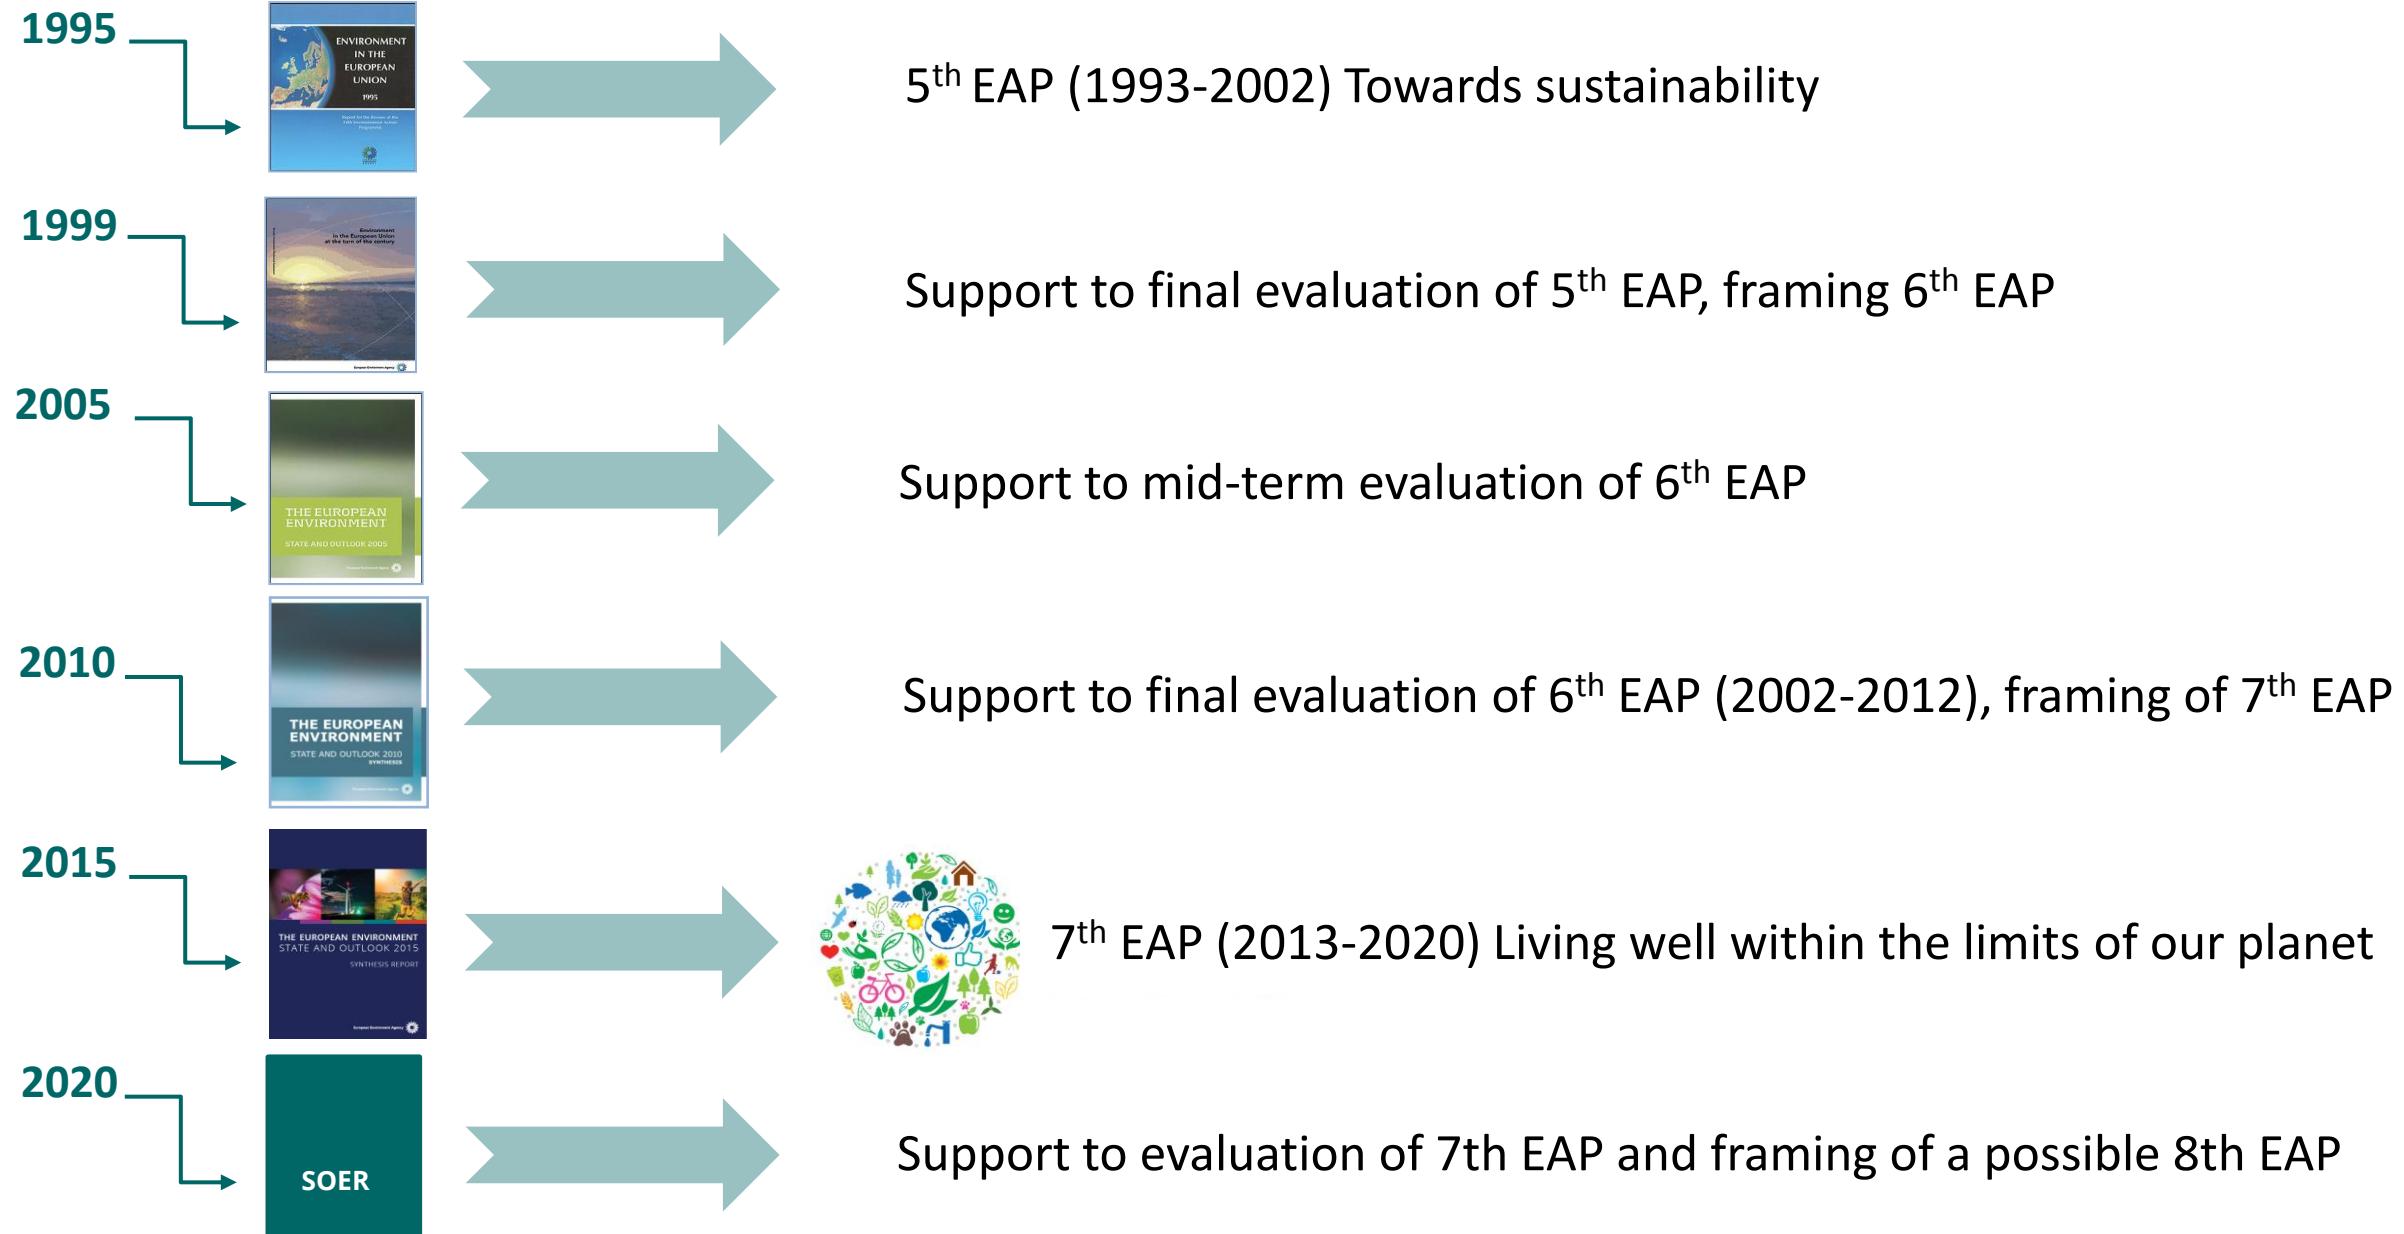

1995		<b>SOER 1995</b>	- report (151 pp) + summary - addresses 5 EAP targets - focus on <b>sectoral integration</b>
1996			
1997			
1998			
<b>1999</b>		<b>SOER 1999</b>	- big report (446 pp) + summary - addresses environmental <b>trends</b> - focus on DPSIR, link between issues
2000			
2001			
2002			
2003			
2004			
<b>2005</b>		<b>SOER 2005</b>	- bigger report (569 pp, Parts A, B & C) - addresses air, water, land - focus on <b>DPSIR</b> , core set of indicators
2006			
2007			
2008			
2009			
<b>2010</b>		<b>SOER 2010</b>	- several reports (Parts A, B, C + Synthesis) - addresses 6EAP priority areas - focus on <b>systemic challenges</b>
2011			
2012			
2013			
2014			
<b>2015</b>		<b>SOER 2015</b>	- several reports (A, B, C + Synthesis), largely web-based - addresses 7EAP priority areas - focus on the <b>need for systemic transitions</b>
2016			
2017			
2018			
<b>2019</b>		<b>SOER 2020</b>	- integrated environmental assessment report (2019) stakeholder process (2019/2020) and Synthesis (2020)
<b>2020</b>			- focus on 7EAP priority areas, <b>sustainability prospects</b>

# Evolving understanding of challenges and responses

Characterisation of key challenges	Key features	In the spotlight in	Policy approaches (examples)	Assessment approaches and tools (examples)
Specific	<ul style="list-style-type: none"> <li>•   • linear cause-effect</li> <li>•   • large (point) sources</li> <li>•   • often local</li> </ul>	1970s / 1980s (continuing today)	targeted policies and single-issue instruments	datasets, indicators
Diffuse	<ul style="list-style-type: none"> <li>○   ○ cumulative causes</li> <li>○   ○ multiple sources</li> <li>○   ○ often regional</li> </ul>	1980s / 1990s (continuing today)	policy integration and raising public awareness	DPSIR (driver, pressure, state, impact, response) data sets, indicators, environmental accounts, outlooks
Systemic	 <ul style="list-style-type: none"> <li>○   ○ systemic causes</li> <li>○   ○ interlinked sources</li> <li>○   ○ often global</li> </ul>	1990s / 2000s (continuing today)	policy coherence and systemic approaches (e.g. <b>green economy</b> )	DPSIR, STEEP (social, technological, environmental, economic, political) indicators and accounts, systems analysis, foresight, <b>stakeholder participation</b>

# SOER support to EU environmental policies

# SOER 2020 overall structure

## SOER 2020

### Integrated Assessment (2019)

- State of Europe's environment in the context of drivers and policy responses
- Sustainability prospects from the globalised production-consumption systems perspective and transitions to long-term policy goals
- 300 pages, English only

### Synthesis stakeholder interactions (2019-2020)

### Synthesis (2020)

- Key findings of the Integrated Assessment
- Outcomes of the stakeholder interactions
- 50-60 pages, English + translations

Stakeholder contributions, consultations

Stakeholder consultations

# Integrated assessment (300 pages)

## Part 1. Setting the scene (30 p)

Presenting Europe's relevant policy frameworks and long-term sustainability goals as well as the European-global context and trends

Starting point is SOER 2015 conclusions

**1:** Describing the **policy framework** 2020–2030–2050 (environmental acquis, Biodiversity, 7<sup>th</sup> EAP, Paris Agreement, SDGs), with a focus on recent developments

**2:** Assessing **global-European context and trends**: megatrends, 'great acceleration', planetary boundaries, resilience and systemic risks

### Development principles

1. Matching structure and evidence
2. Integrated assessment across all sections
3. Summary assessments developed where feasible
4. Three overarching integration foci:
  - **Environment**: natural capital
  - **Economy**: resource efficient, low carbon, circular & bio-economy
  - **People**: health, well-being, cities
5. Integration of country information (data and case studies)
6. Visibility of EEA-Eionet work in synergy with other EU work

## Part 2. Environmental / climate trends (180 p)

Assessing progress to established EU environmental policy goals in the 2020–2030 timeframe (2050 for climate and biodiversity), including:

- Policy context
- Key trends (with country-level info) and outlooks
- Progress to targets
- Policy responses
- Thematic & sectoral summary assessments

**3 – 12: Ten thematic assessments** (framed by 7<sup>th</sup> EAP POs 1–3, as far as feasible)

- |                           |                        |
|---------------------------|------------------------|
| • Biodiversity and nature | • Air pollution        |
| • Freshwater              | • Noise pollution      |
| • Marine                  | • Waste and resources  |
| • Land and soil           | • Chemicals pollution  |
| • Climate change          | • Industrial pollution |

### 13: Environmental pressures from sectors

complementing the thematic analysis and assessing progress across sectoral environmental policy targets

- |             |                           |
|-------------|---------------------------|
| • Energy    | • Agriculture             |
| • Transport | • Forestry                |
| • Industry  | • Fisheries / aquaculture |

### 14: Sectors and the green economy

 (cross-sectoral, macro-economic assessment)

- Benefits for sectors for society (jobs, GVA)
- Role of sectoral policies in driving eco-innovation

**15: Summary assessment and outlook** (2020–2030), drawing on the thematic & sectoral assessments, addressing the 7<sup>th</sup> EAP objectives

## Part 3. Sustainability prospects (80 p)

Assessing progress towards Europe's sustainability goals through a globalised production-consumption systems perspective, and exploring future challenges (2030 – 2050) and opportunities for systemic change

### Intro: Sustainability through a systems lens

- Describing how a systems perspective helps to understand barriers to sustainability and long-term policy challenges

### 16: Production-consumption systems

- Production and consumption in Europe at a glance (global value chains, footprints, import dependency, critical materials, etc.)
- **Energy, food, mobility**: socio-economic outcomes, pressures, actors, interests, systemic characteristics (lock-ins, etc.)
- Interlinkages across systems and scales, including biophysical (resource nexus), socio-economic (fiscal, finance) and **urban** aspects

### 17: Sustainability challenges and opportunities

- Europe and the **SDGs**: trends and progress
- Implications of **global megatrends** (demographic, resources, technological, etc.) and associated uncertainties for achieving Europe's sustainability goals
- Synergies and trade-offs between SDGs: key implications for Europe and its long-term EU policy frameworks (CE, LCE, BE, CAP, Energy Union, etc.)

**18: Summary assessment and sustainability prospects** (2030–2050), drawing on the systems assessments and addressing long-term EU policy frameworks and the SDGs

### 19: Responding to sustainability challenges

- Evidence about effecting and governing transitions (systems innovation, visions and pathways, learning and **experimentation, cities and communities**, etc.) and ensuring resilience (adaptation, nature-based solutions, etc.)

## Part 4. Conclusions (10 p)

Delivering key messages and reflections that set up the Synthesis stakeholder process

### Overall assessment of outcomes

#### Key messages:

- State and trends
- Outlook
- What works or not at different scales

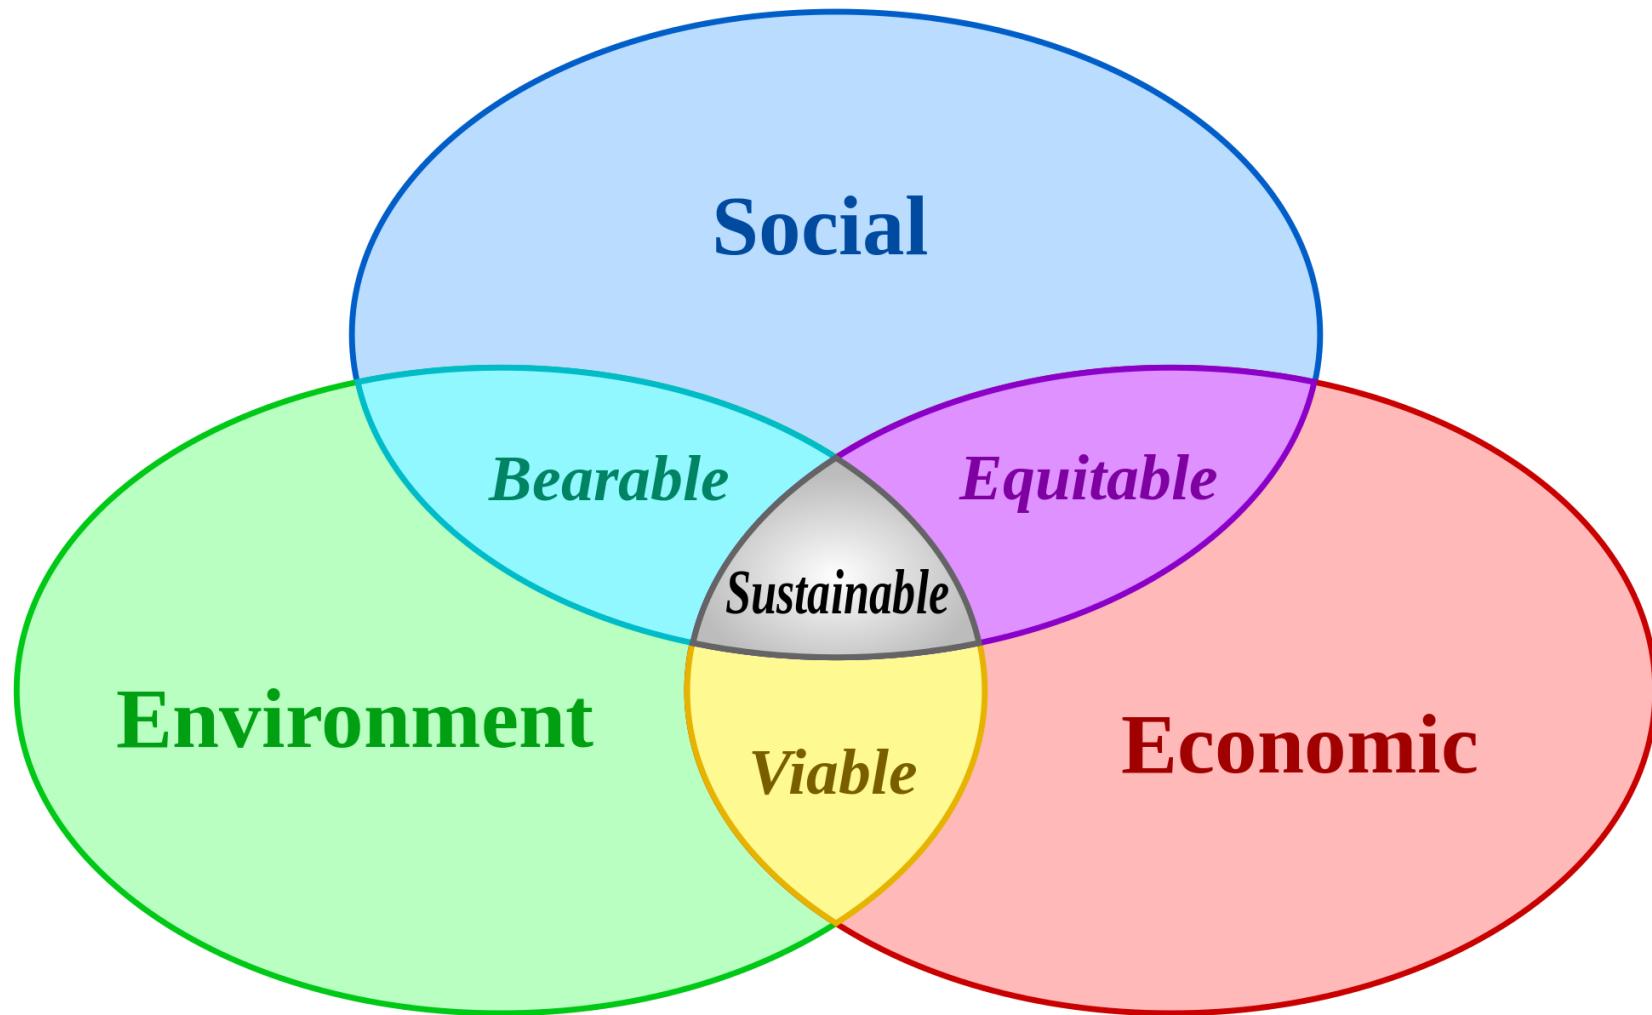

**Short reflection on implications** for progress towards Europe's sustainable future, policy development, investments and knowledge

- From 7<sup>th</sup> EAP to 8<sup>th</sup> EAP, framed by SDGs
- MFF 2021–2028 discussions
- Research and knowledge base

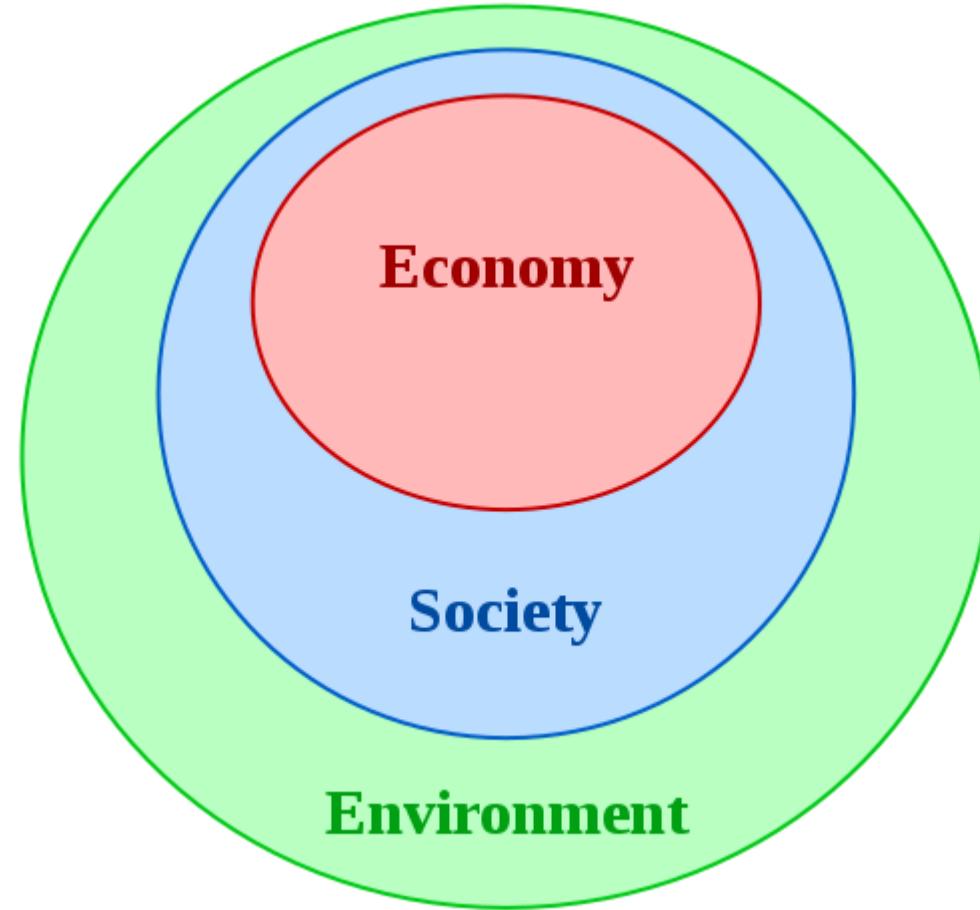

## Executive summary (4 p)

- Overview of assessment structure and logic
- Key outcomes and messages from Parts 1 to 4

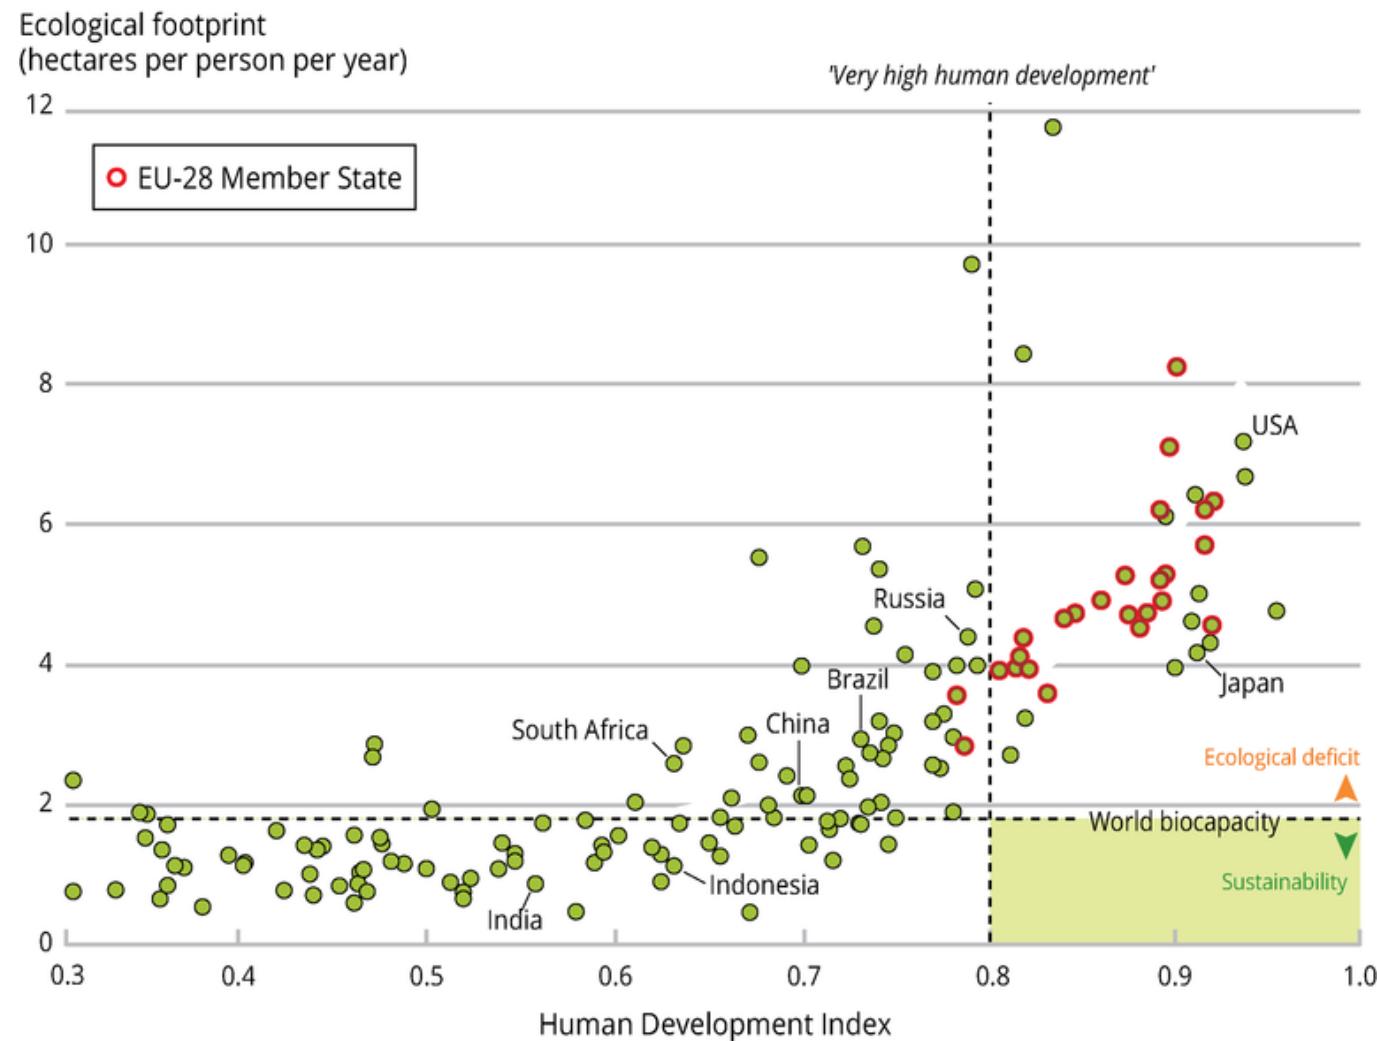

# Sustainability prospects

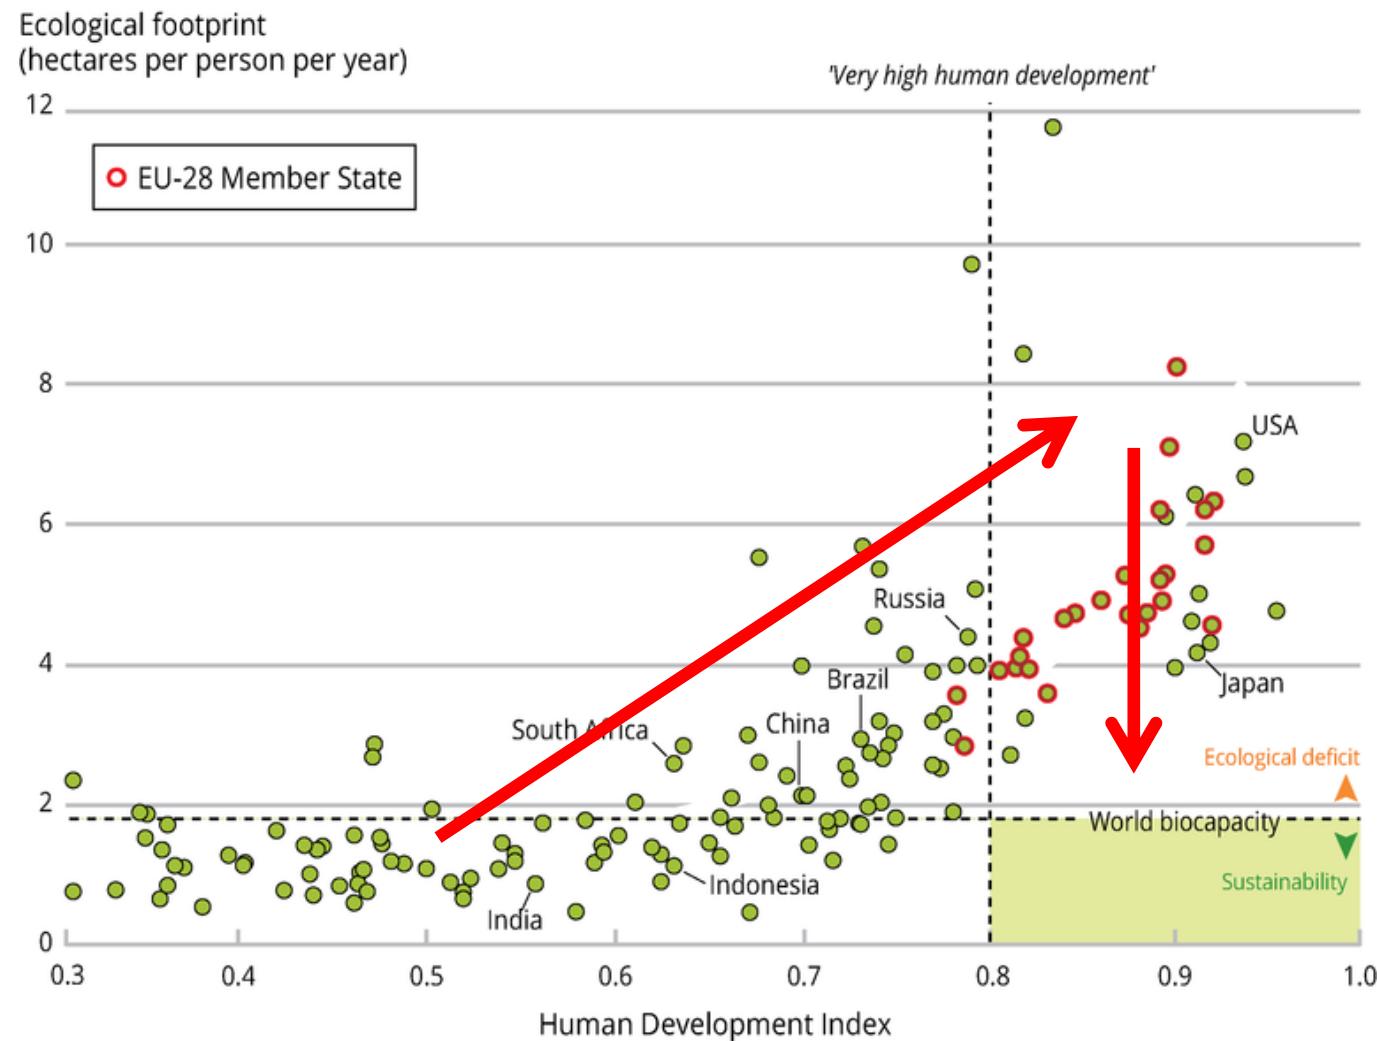

# Sustainability prospects

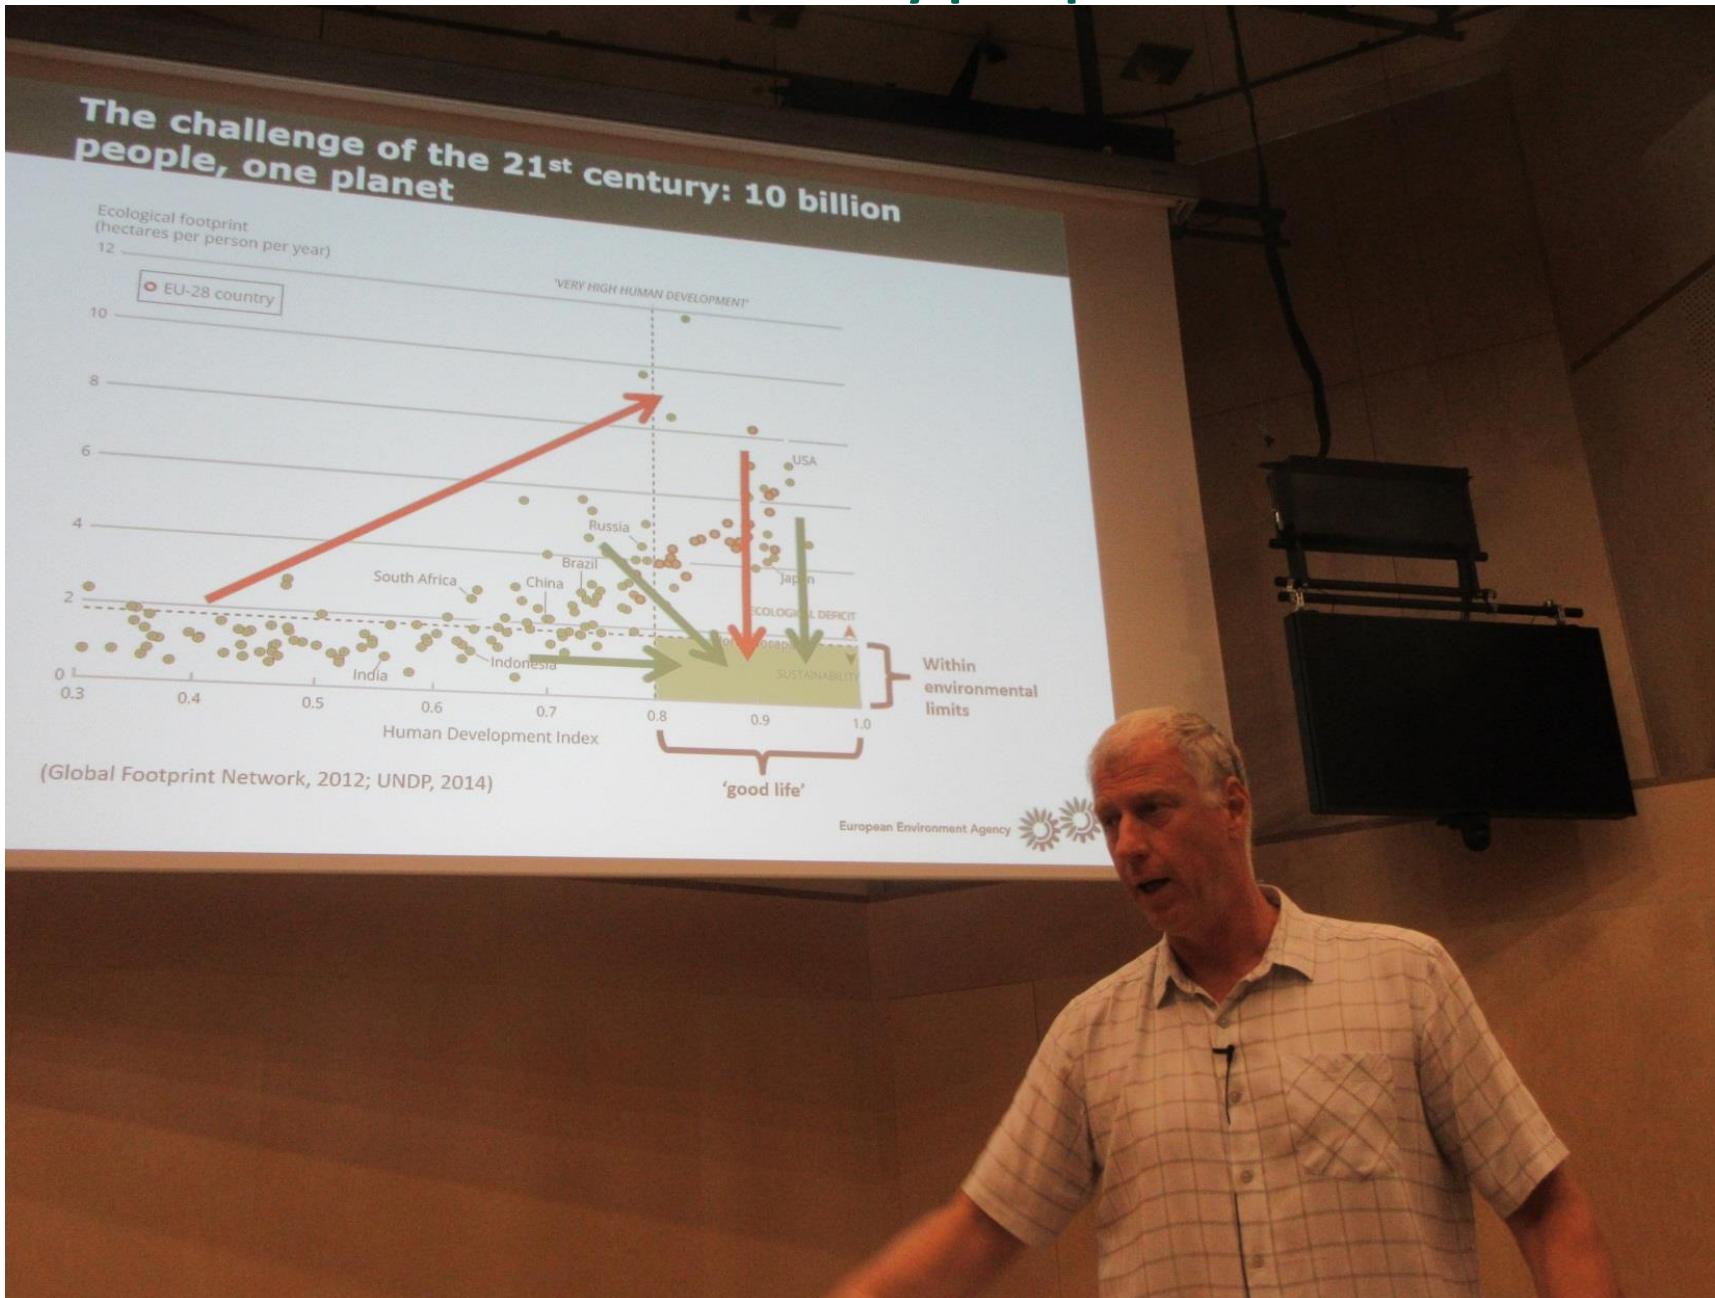

# Sustainability prospects

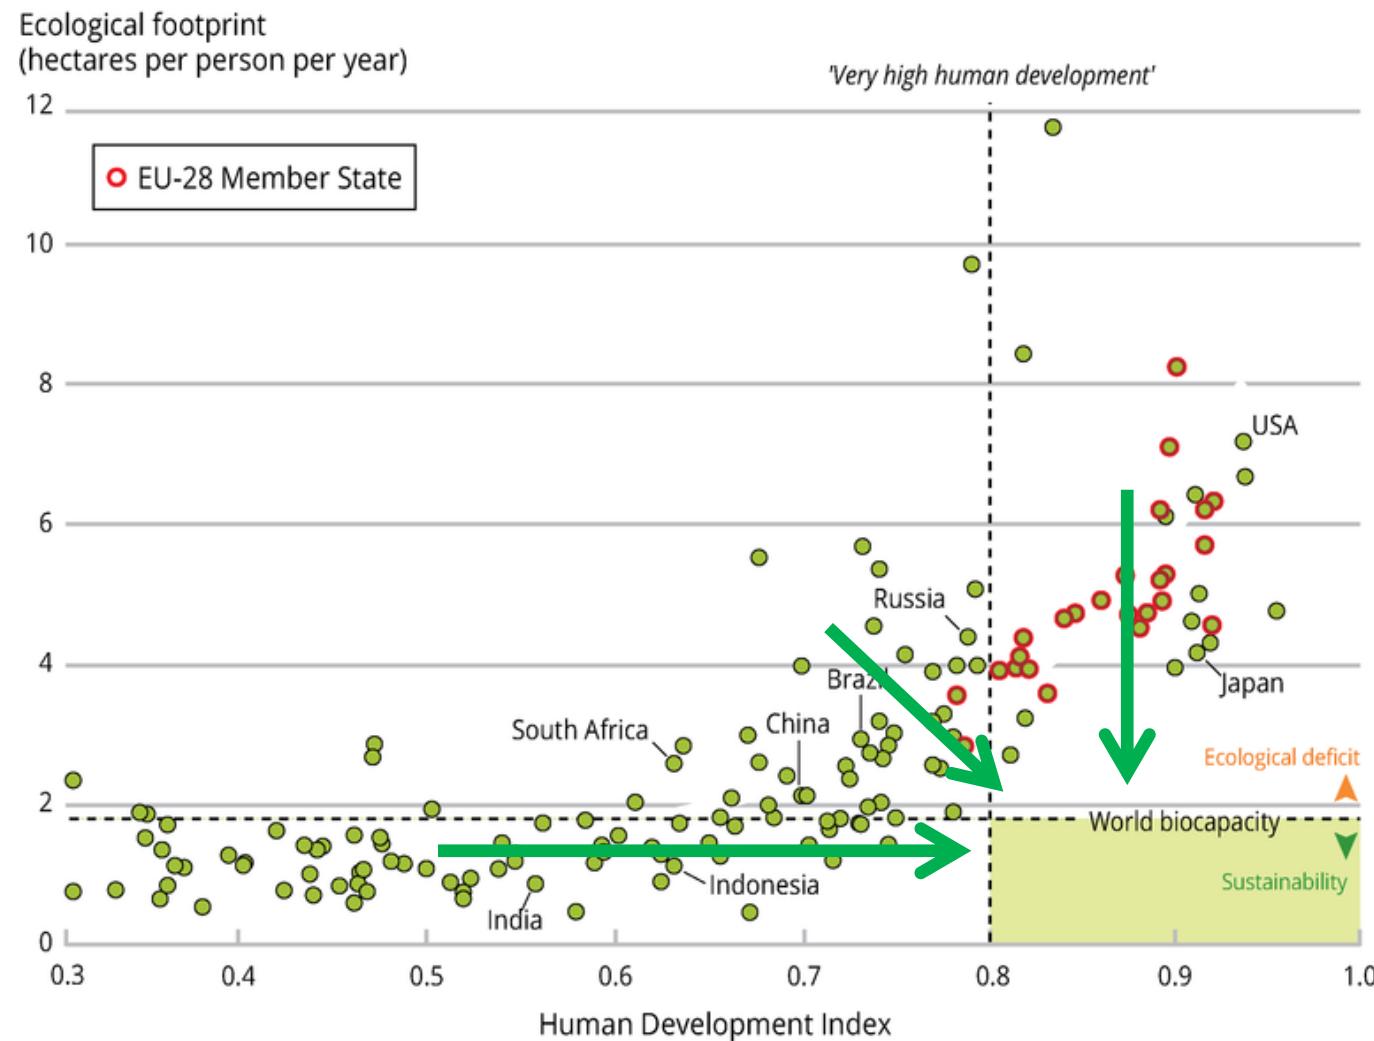

# Sustainability prospects

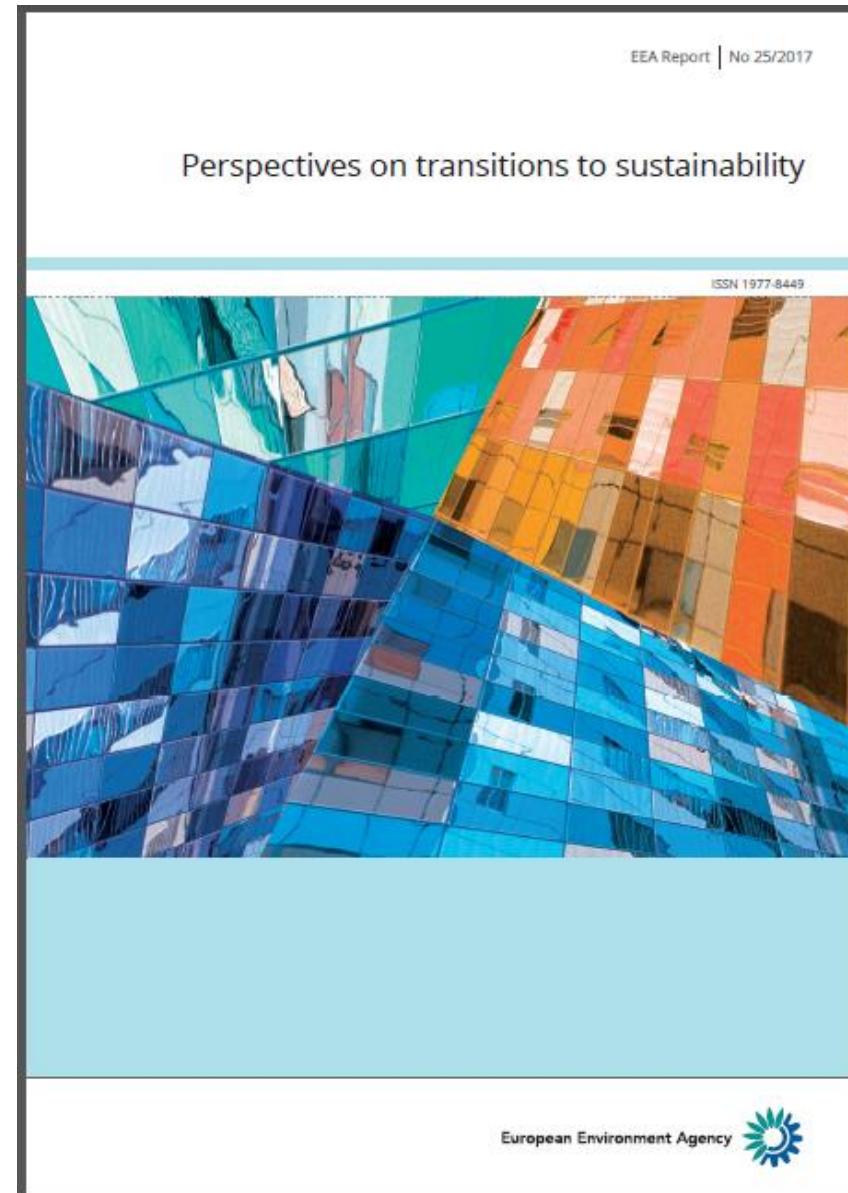

# Sustainability prospects

# Sustainability prospects

# Sustainability prospects

## 1. Transformations in **socio-ecological** systems

### **Socio-ecological system**

can be described as a coherent system characterised by interconnections, mutual dependencies and dynamic relationships between **humans** and the **environment**.

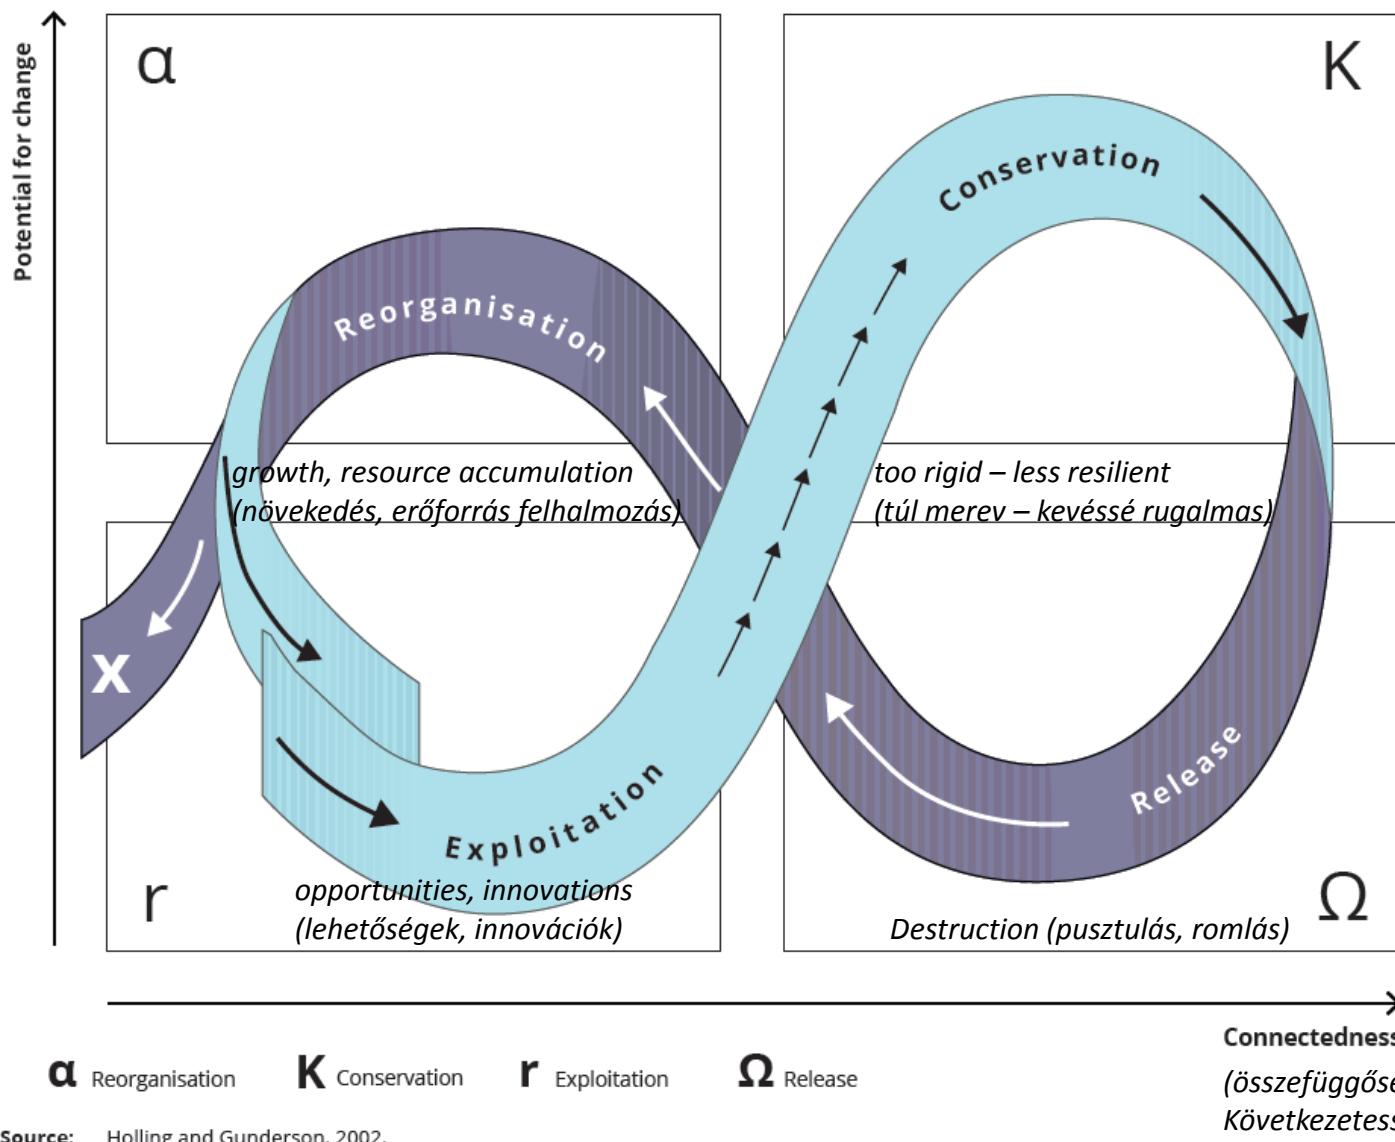

Key words:

- Global responsibility
- Transformation extends beyond disciplinary boundaries
-

# Sustainability prospects

## 1. Transformations in socio-ecological systems

Source: Holling and Gunderson, 2002.

Resource: <http://eionet.kormany.hu/download/3/ac/12000/TH-AL-17-025-EN-N.pdf>

## Sustainability prospects

### 1. Transformations in **socio-ecological** systems

„...a key question is whether or not society can collectively avoid the **creative destruction (kreatív pusztulás)** /release phase ( $\Omega$ ) at a global level (associated with exceeding planetary boundaries) And instead allow some parts of socio-ecological systems to collapse and move into a state of renewal ( $\alpha$ ).”

# Sustainability prospects

## 2. Socio-technical transitions to sustainability

Unleaded fuel

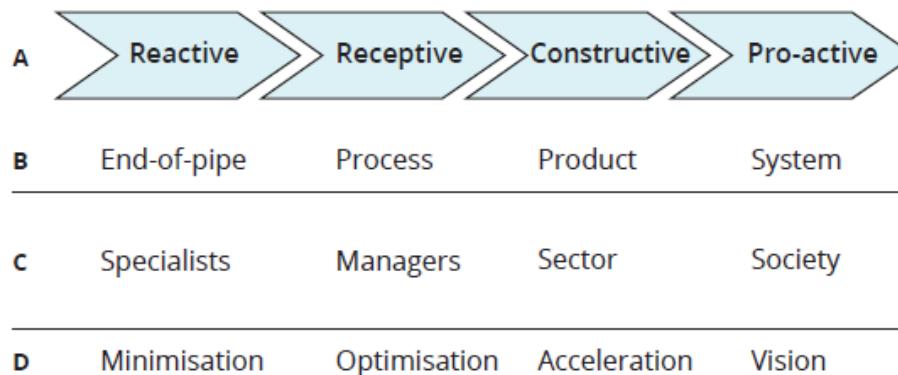

Slow steam

Solar boats

...Necessity of shipping?

A Response phase

B Focus of attention

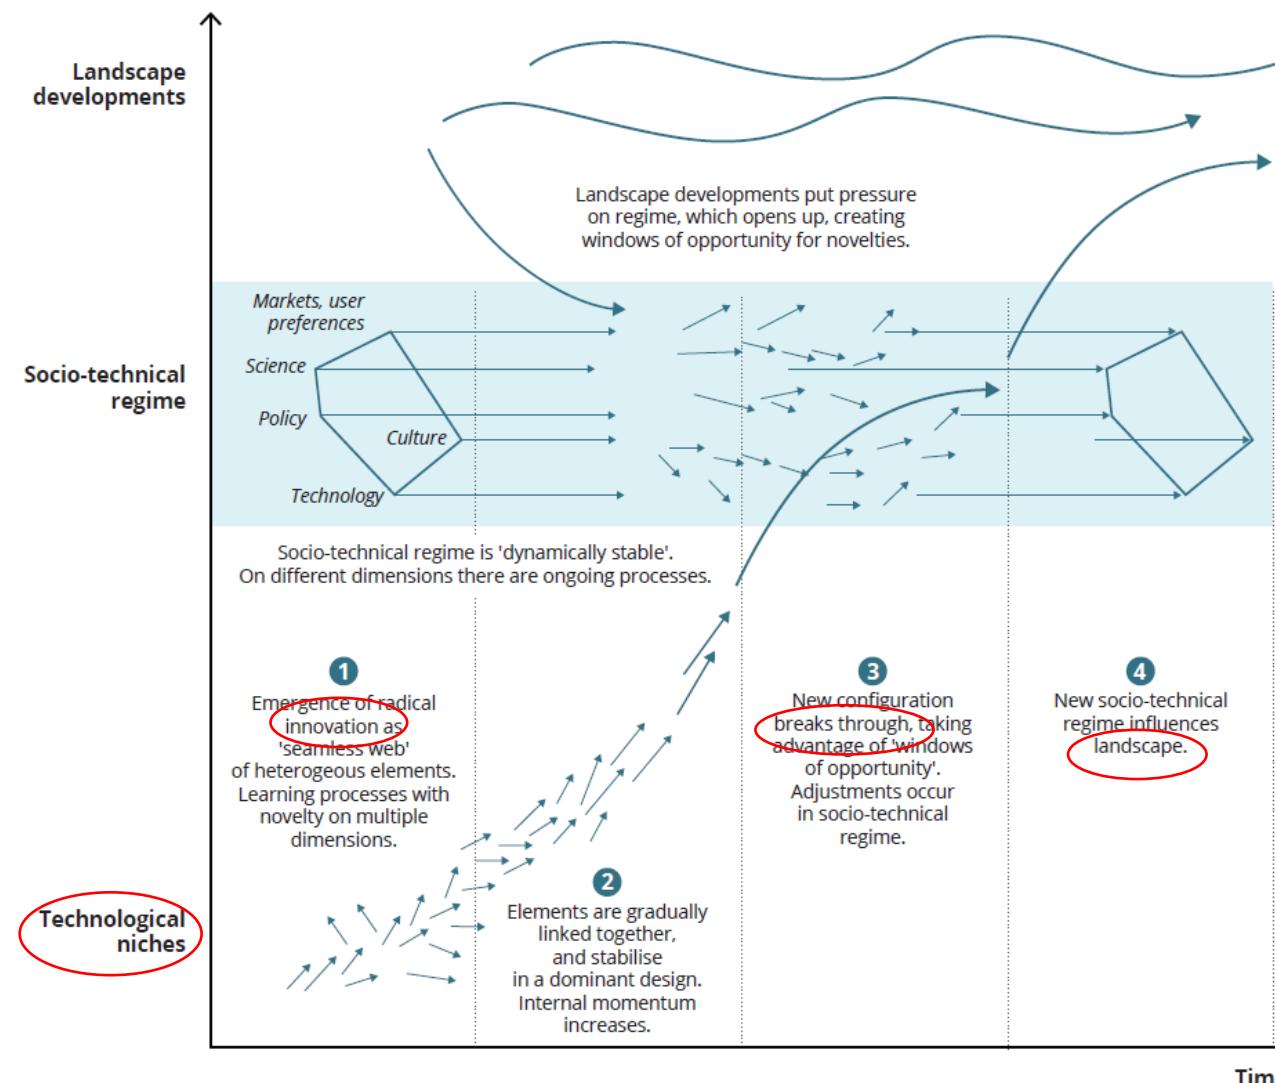

C Main actors

D Driving philosophy

*Phases and orientations in environmental policies*

# Sustainability prospects

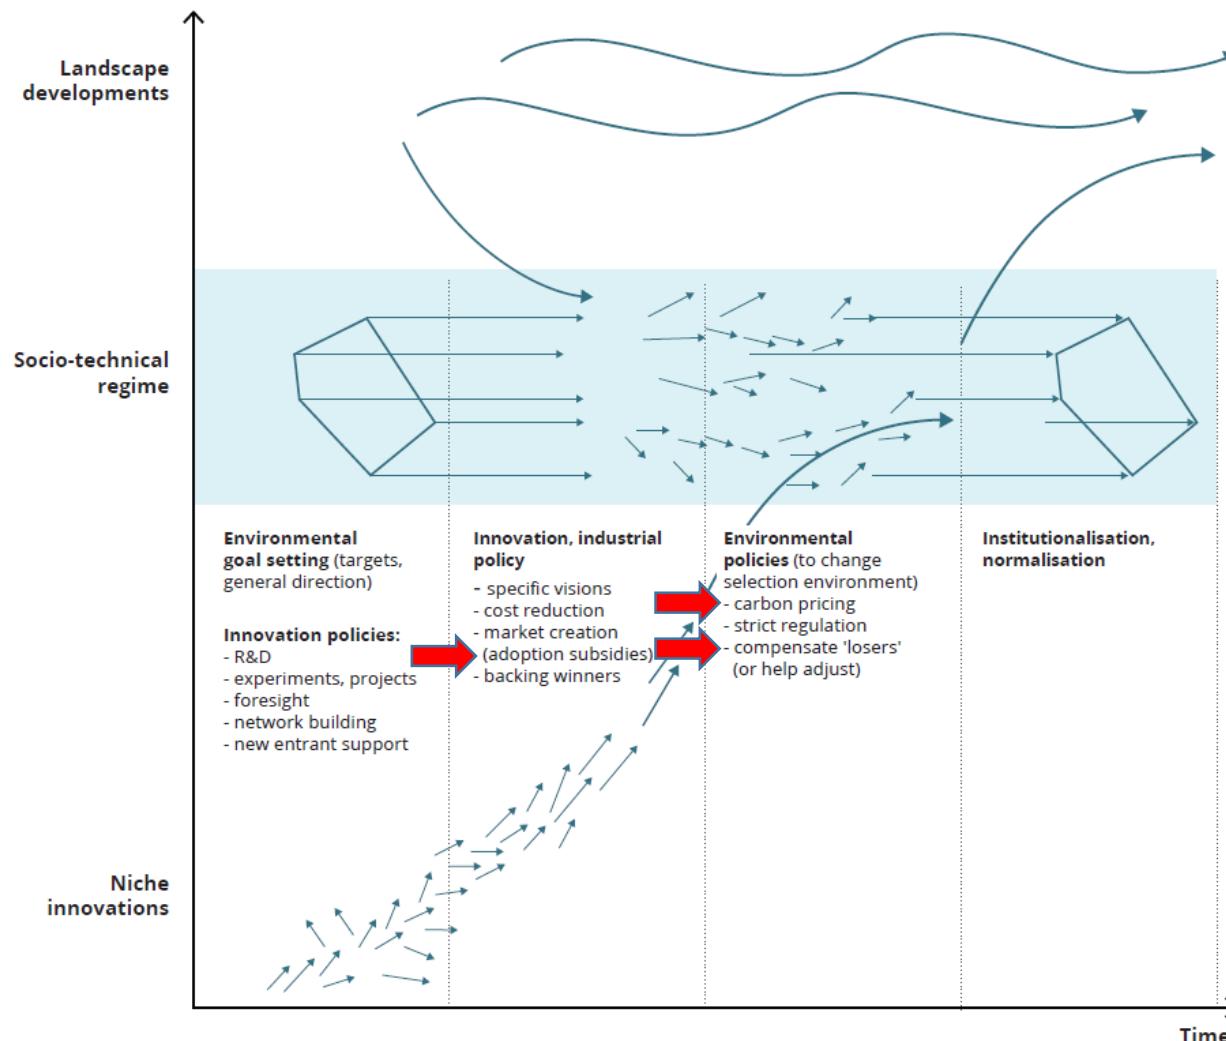

## 2. Socio-technical transitions to sustainability

*Multi-level perspective on socio-technical transitions*

# Sustainability prospects

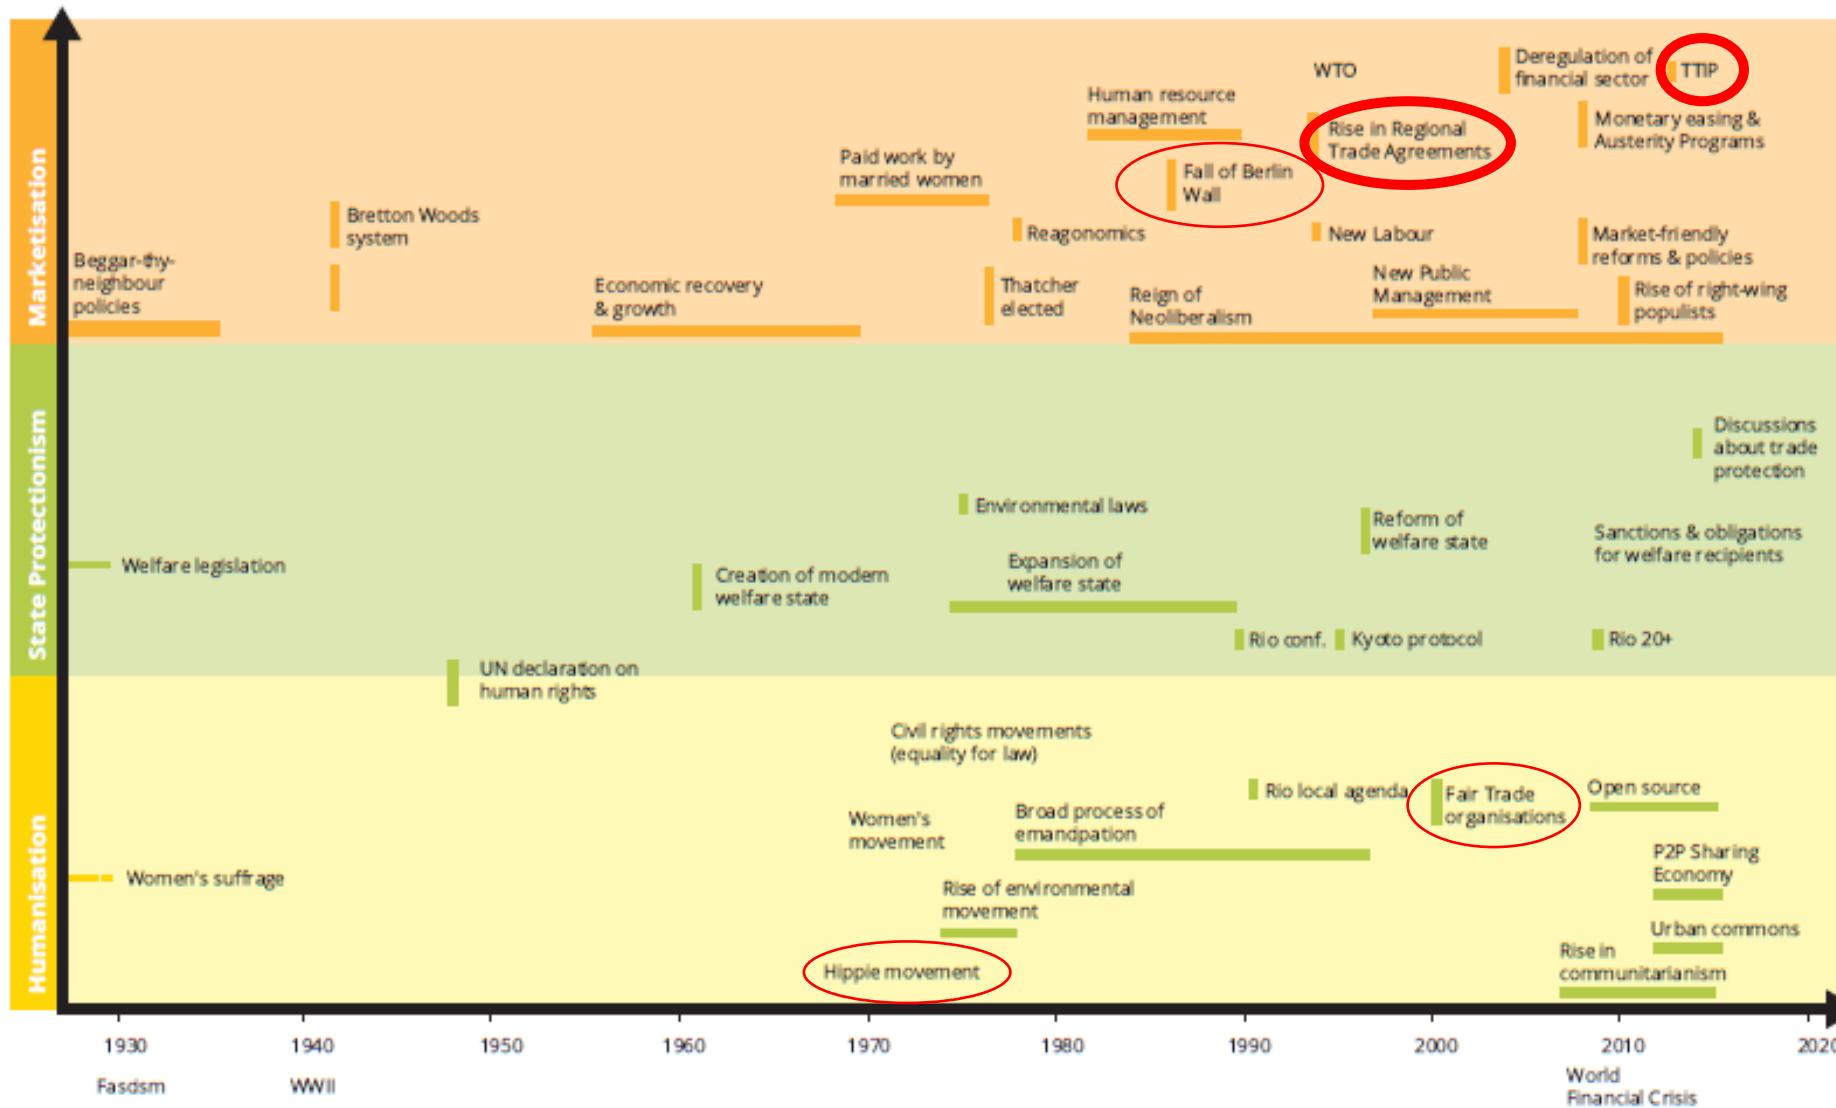

## 2. Socio-technical transitions to sustainability

*Shifting mix of policy instruments during socio-technical transitions*

# Sustainability prospects

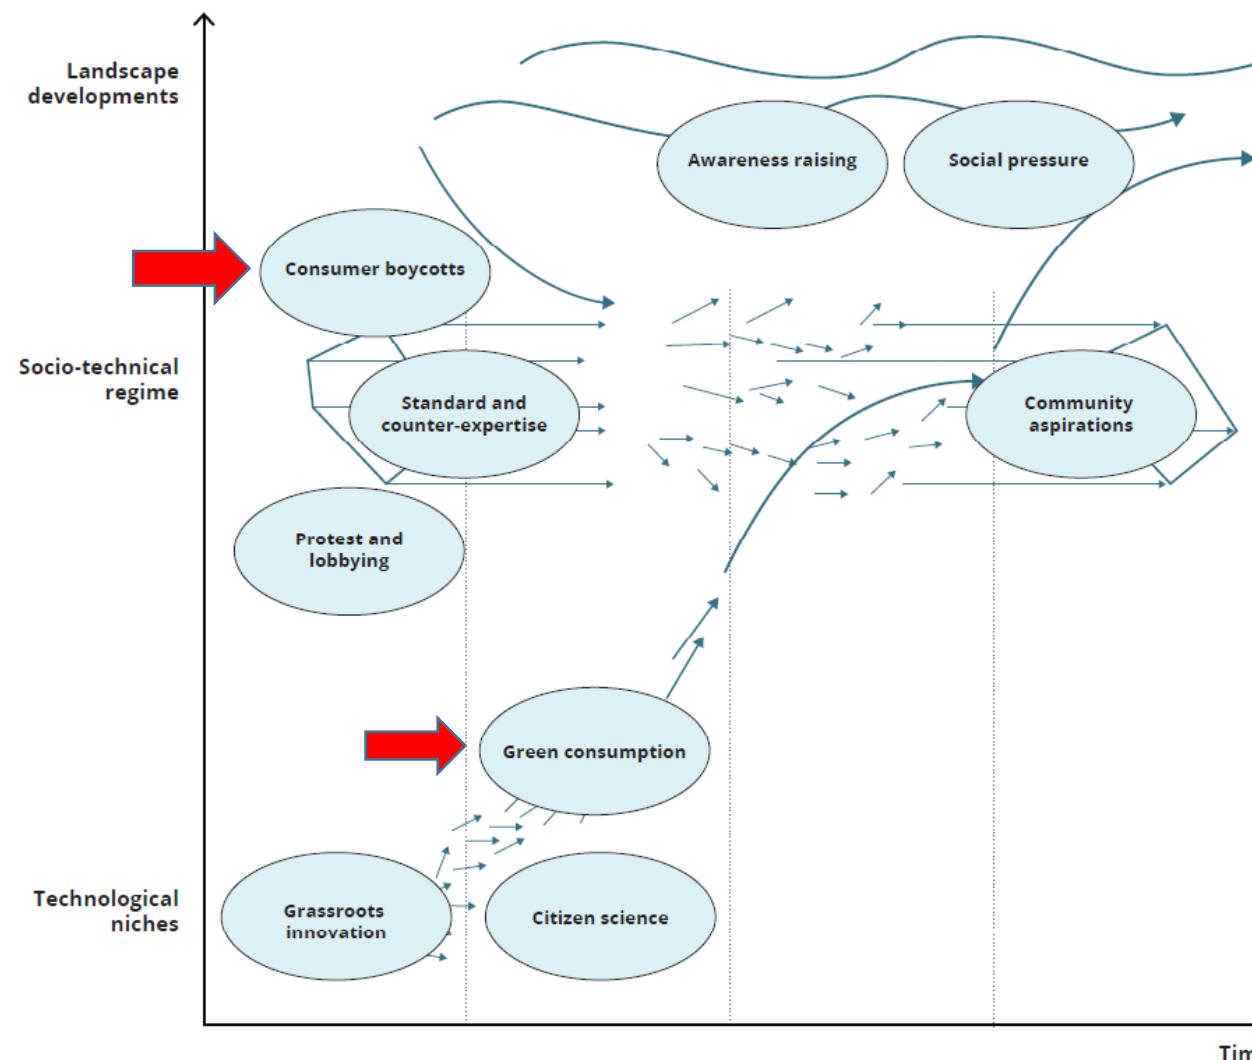

## 3. Socio-economic transformations: insights for sustainability

*Historical dynamics of marketization, state protectionism and humanisation*

# Sustainability prospects

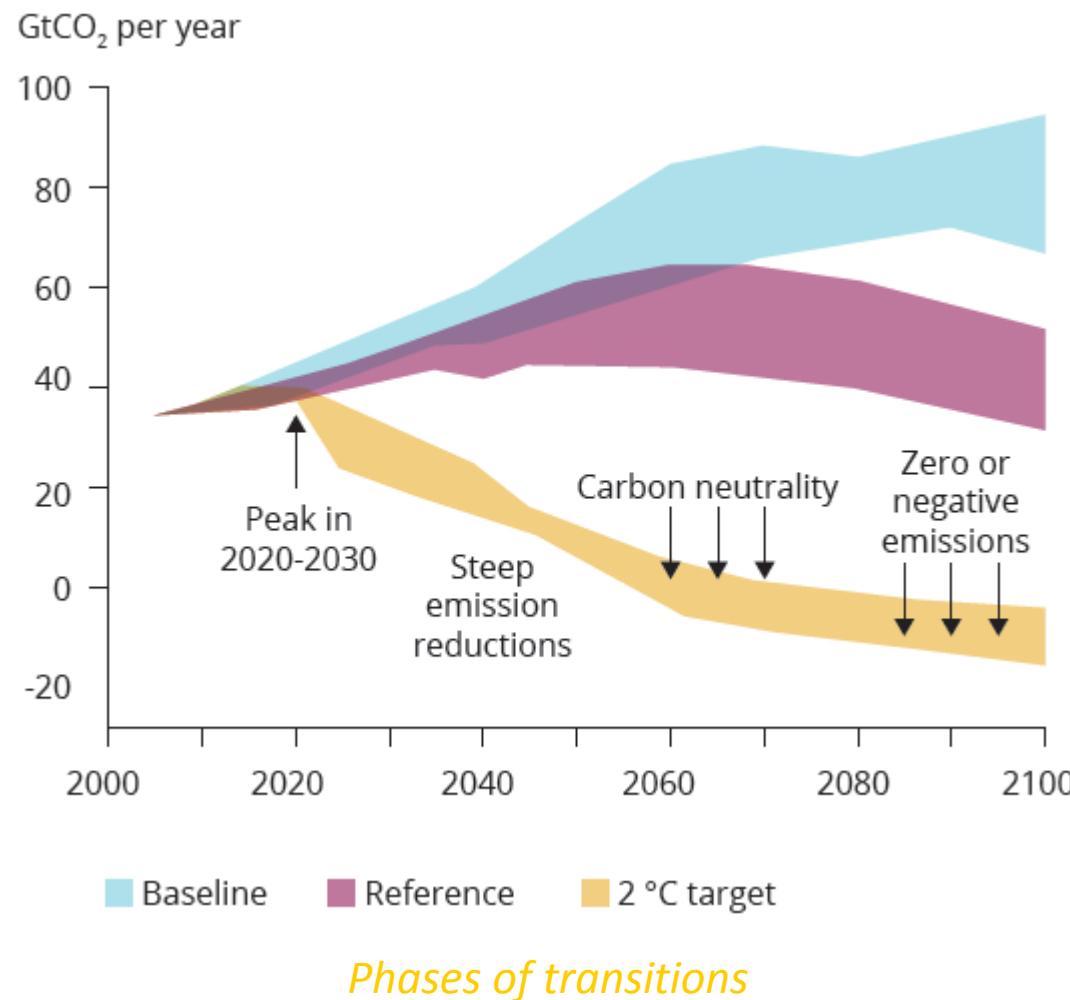

## 4. Action-oriented perspectives on transitions and system innovation

*Mapping civil society activity in sustainable electricity transitions*

# Sustainability prospects

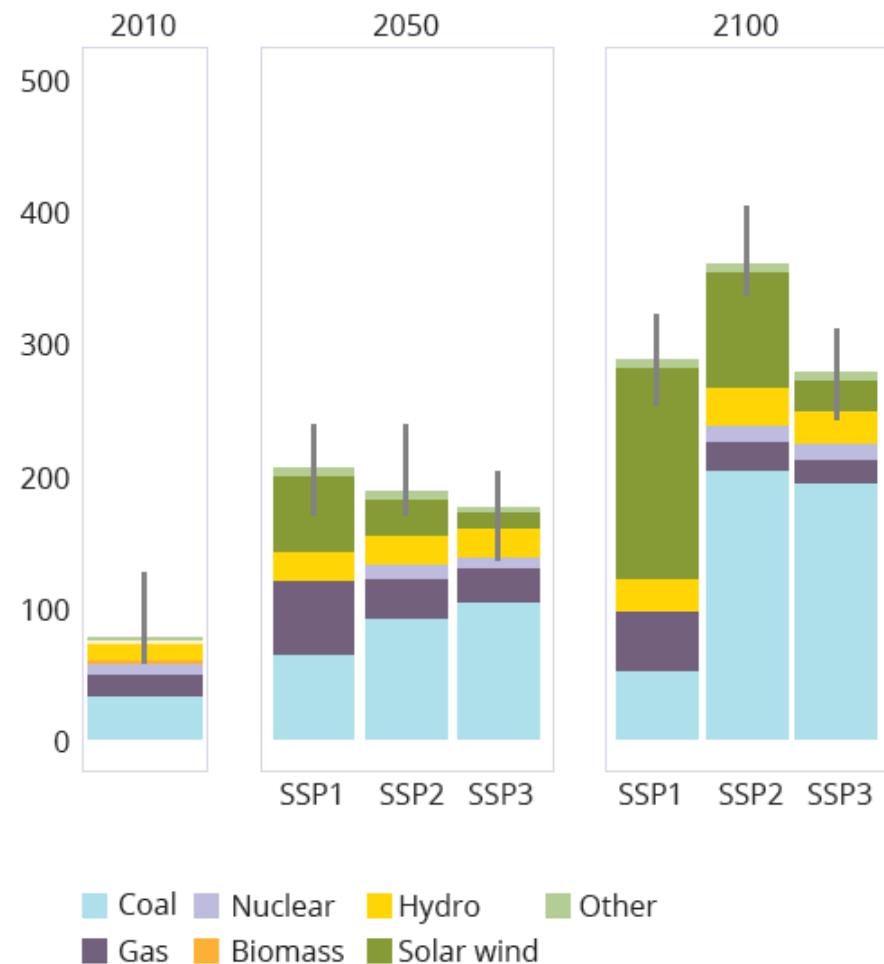

## 5. Integrated assessment modelling approaches to analysing systemic change

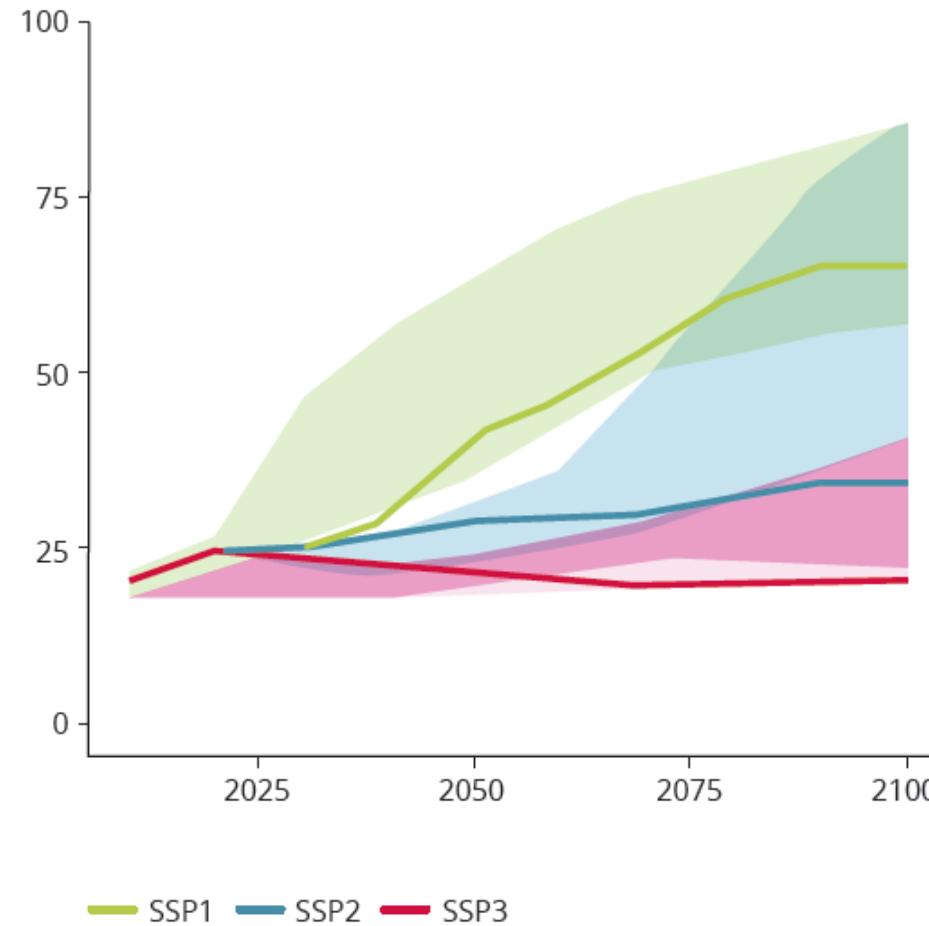

# Sustainability prospects

## 5. Integrated assessment modelling approaches to analysing systemic change

# Focus EIONET

## Text boxes

valuation will not fully include the intrinsic value of nature or the cultural and spiritual services that it provides.

### Box 3.1 Structure of Chapter 3

- Assessing trends in natural capital is a comprehensive undertaking, and SOER 2010 highlighted the need for dedicated management of natural capital as a means of integrating environmental priorities and the many sectoral interests that depend upon them. This chapter focuses on ecosystems, and complements the focus on the resources component of natural capital in Chapter 4. The sections within this chapter attempt to assess ecosystem capital by addressing three dimensions:
- Trends in the state of — and prospects for — biodiversity, ecosystems, and their services, with a focus on biodiversity, land, soils, freshwater and marine ecosystems (Sections 3.3 to 3.5, 3.8);
  - Trends in the impacts of pressures on ecosystems and their services, with a focus on climate change as well as on the emission of nutrients and pollutants to the air and water (Sections 3.6 to 3.9);
  - Reflections on the scope for long-term, interconnected ecosystem-based management approaches (Section 3.10).

### 3.2 European policy aims to protect, conserve and enhance natural capital

The European Union and its Member States — as well as many neighbouring countries in Europe — have introduced a substantial amount of legislation to protect, conserve and enhance ecosystems and their services (Table 3.1). A wide range of European policies affect and benefit from natural capital. These include the Common Agricultural Policy, Common Fisheries Policy, cohesion policy, and rural development policies. The ultimate objective of these policies may not be protection of natural capital. Nevertheless, legislation to tackle climate change, chemicals, industrial emissions and waste helps to ease the pressures on soil, ecosystems, species, and habitats as well as reducing nutrient releases (EU, 2013).

## National case study: Planting seeds of change in Hungary

- Growing local, sustainable food
  - Keeping agriculture GMO-free
  - Preserving a culture, one fruit species at a time
  - Promoting local, sustainable food: The “National Park Product” trademark
  - Bigger isn’t always better: The short food supply chain programme
- Community-building and education
  - Building communities by cultivating gardens
  - Ecology and education among the trees: Forest schools
  - Connecting to crops through schoolyard gardens

What seeds of change are you planting in your country?

Innovation for sustainability  
**isiNOVA**

## Fotó verseny: küld be a legjobb vizes képed

### 1. A víz és mi

Isszuk, fürdünk benne és főzünk vele. Az árvizek vagy az aszályok egész városokat érintenek. Mit jelent a víz Neked?

### 2. Víz és természet

Folyók, tavak és tengerek nem csak segítik a földi életet, de maguk is otthont adnak számos állatnak és növénynek. Az óceánok kulcs szerepet játszanak a bolygó éghajlatának kiegyensúlyozásában. El tudod kapni mindenöt a látható és láthatatlan hasznat, amit a vizek jelentenek? Vajon a tiszta vizek veszélyben vannak?

### 3. Víz és gazdaság

A víz alapvető a mezőgazdaságban, az áramellátásban és sok termék létrehozásában. A folyók és a tengerek a legfőbb kereskedelmi útvonalak – összekötnek országokat és kultúrákat. Miért fontos a víz a gazdaságunkban? Hogyan hat a gazdaság a vizekre?
