

# Session 4: Scoping priorities

## Building a rolling work programme for industry - reporting

Image © Jorge Franganillo

# Framing – reporting activities

- Further improve reporting processes
- Interaction between EEA and countries
- Prioritisation of activities as presented in the background document
- New dataflows

European Environment Agency 

4<sup>th</sup> Eionet NRC workshop on Industrial Pollution  
BACKGROUND PAPER – SESSION 4

**BUILDING A ROLLING WORK PROGRAMME FOR INDUSTRY**

*This document maps potential areas of work for the coming years. This includes aspects for direct lead by the EEA and this NRC, but, also, areas where suggestions could be put forward to the European Commission. The discussion will be structured around three main topics: 1) reporting activities, 2) assessments and 3) international discussions of relevance for this NRC.*

**INPUT EXPECTED FROM COUNTRIES**

Countries are expected to reflect on the ideas included in this document and provide their views as well as, potentially, additional ideas for inclusion in EEA's future annual work programme. Specific questions to prepare a country position are:

1. What are the key strategic priorities to improve the reporting processes and the quality of data?
2. How can the EU level best support countries in their tasks of collating data, disseminating it and assess policies in a data-bound manner?
3. What are the areas where broadening the scope of this NRC can best influence in the policy cycle?

**TOPICS FOR DISCUSSION**

**1. REPORTING ACTIVITIES**

The NRC on industrial pollution is responsible for the following ongoing reporting exercises:

- Reporting to the EU Registry on Industrial Sites
- Reporting to the European Pollutant Release and Transfer Register
- Reporting on emissions and energy input from Combustion Plants

The following upcoming reporting obligations fall under the remit of this NRC:

- Reporting on integrated emission management techniques applied in mineral oil refineries according to [Decision 2014/768/EU](#). This reporting exercise will cover 2017-2019 and is due by 30 September 2020.
- Reporting on medium-sized combustion plants, as provided by [Directive 2015/2193/EU](#). This reporting obligation has a first deadline on January 1, 2021.
- Reporting on implementation aspects of [Directive 2010/75/EU](#). The legal act covering this reporting obligation is being discussed, ~~at the moment~~, in the relevant Committee. However, the current proposal provides that reporting will start in

# Reporting to the EEA within this NRC's scope

- EU Registry on Industrial Sites
  - Including new IED implementation elements
- European Pollutant Release and Transfer Register (E-PRTR) + Reporting on Combustion plants (LCP)
- New dataflows
  - Mineral Oil Refineries (monitoring of BATc) – By Sep 2020
  - Medium-sized Combustion Plants by Jan 2021

# Where we seek input

- EU Registry on Industrial Sites
  - Mapping of historical data
  - IED implementation (additional aspects)
  - Stabilisation of the data flow
- E-PRTR + LCP
  - Thresholds, substances, diffuse emissions
  - Calculation/estimation methods
  - Guidance on Combustion Plants
- Interaction EEA and countries

# Plenary discussion

- Countries to express their priorities for each topic
- Countries to signal aspects that were appreciated or aspects that could improve in terms of interaction with EEA
- Additional feedback can be provided in written to [daniel.montalvo@eea.europa.eu](mailto:daniel.montalvo@eea.europa.eu) by June 29
