**Economic Commission for Europe****Committee on Environmental Policy****Special session**

Geneva, 23–25 February 2016

Item 3 (g) of the provisional agenda

**The Eighth Environment for Europe Ministerial Conference:  
proposed Conference outcomes****Revised draft Pan-European Strategic Framework for  
Greening the Economy****Note by the Bureau with support of the secretariat and the United  
Nations Environment Programme\* \*\****Summary*

The Reform Plan of the Environment for Europe process (ECE/CEP/S/152, annex I, and Corr.1) adopted by the United Nations Economic Commission for Europe (ECE) Committee on Environmental Policy in 2009, and subsequently endorsed by ECE, mandated the Committee to act as the convening body for the preparatory processes for the Environment for Europe ministerial conferences.

At its twenty-first session (Geneva, 27–30 October 2015), the Committee invited its Bureau to continue with the preparations for the Eighth Environment for Europe Ministerial Conference (Batumi, Georgia, 8–10 June 2016). Regarding the green economy theme, the Committee generally agreed the strategic part of the draft Pan-European Strategic Framework for Greening the Economy and invited its members and observers to submit additional comments by 15 November 2015 (see ECE/CEP/2015/2, forthcoming).

The present document was prepared by the Bureau, with support from the secretariat and the United Nations Environment Programme. The Committee will be invited to consider the revised draft with a view to finalize it for prospective adoption by Ministers in Batumi.

---

\* This note was submitted on the above date owing to the need to consult with external partners.

\*\* This document was not formally edited.

## Introduction

1. In response to the commitment made by Ministers of the United Nations Economic Commission for Europe (ECE) region in Astana in 2011 to take the lead in the transition to a green economy, the ECE Committee on Environmental Policy mandated ECE, jointly with the United Nations Environment Programme (UNEP) and other relevant international organizations and stakeholders working on green economy, to develop a proposal for a pan-European strategic framework for greening the economy, for consideration by the Committee at its twenty-first session in October 2015 (ECE/CEP/2014/2, paras. 73 and 98 (ee) (v)).

2. In that regard, the Committee asked that the strategic framework should include practical examples, good practices and tools to be used for accelerating the transition to a green economy, while promoting a bottom-up approach, as well as that it should build upon existing knowledge products and platforms. The Committee also asked that the framework include in annex a proposal for a green economy action similar to the Astana Water Action.

3. Following up on that mandate, a first draft of the strategic framework was prepared by the ECE secretariat and UNEP in cooperation with the Organization for Economic Development and Cooperation and the European Environment Agency, as a result of a series of brainstorming meetings hosted by ECE and UNEP and by electronic means.

4. At its twenty-first session in October 2015, the Committee generally agreed the strategic part of the draft Pan-European Strategic Framework for Greening the Economy (see document ECE/CEP/2015/L.4) and invited its members and observers to submit additional comments by 15 November 2015. The Committee also invited its members and observers to submit to the secretariat comments to the proposed voluntary actions to green the economy, which were annexed to the draft Strategic Framework, by the same deadline. Further, it welcomed the proposal by Switzerland to advance the development of the proposed voluntary actions and entrusted Switzerland to form and convene a group of experts in green economy to prepare a revised draft of voluntary actions to green the economy for the Committee's special session in February 2016 (see ECE/CEP/2015/2, forthcoming).

5. Following up on the above mandates, the current document presents the draft Pan-European Strategic Framework for Greening the Economy. The document was revised taking into account comments received and aligning it to the outcomes of the work of the group of experts in green economy, which are presented in a separate document including a draft list of possible green economy actions, for reference only (see Information paper No.6). The annex to the current document includes the proposed green economy initiative to support the implementation of the Strategic Framework.

6. The Committee will be invited to consider the revised draft of the Strategic Framework with a view to finalize it for prospective adoption by Ministers at the Eighth Environment for Europe Ministerial Conference (Batumi, Georgia, 8–10 June 2016).

7. Regarding the proposed green economy initiative, the Committee will be invited to consider it with a view to approving it and inviting interested countries and organizations to join it and launch it at the Batumi Conference.

## I. Draft Pan-European Strategic Framework for Greening the Economy

### *Vision*

*This Strategic Framework envisions the countries of the pan-European region pursuing a development pattern that ensures economic progress, social equity and the sustainable use of ecosystems and natural resources, so as to meet the needs of the present generation without compromising the ability of future generations to meet their own needs. Green economy, as an approach to redirect consumption habits, investments and trade to foster an inclusive green economy towards a shared prosperity, is a promising avenue to achieve sustainable development in the region and beyond.*

### A. Mandate

8. The Strategic Framework for Greening the Economy in the Pan-European Region<sup>1</sup> responds to a decision by Ministers at their Seventh Environment for Europe Conference in Astana in September 2011 to take the lead in the transition to a green economy, as well as their invitation to ECE to contribute, together with UNEP and relevant international organizations, to the development of the United Nations Conference on Sustainable Development (Rio+20 Conference) green economy outcomes.<sup>2</sup>

### B. Aim and scope

9. The aim of the Strategic Framework is to guide the region in its transition to an inclusive green economy by 2030. Such a transition, with adequate support and incentives, will bring investment in innovation for green technology, products and services, foster the transfer of green technology and stimulate green behaviours by consumers. It will result in the reduction of environmental risks and address ecological scarcities as well as provide green jobs and minimize the negative consequences of change for enterprises and the vulnerable groups of society.

10. The Strategic Framework will help countries in the development and implementation of their policies, strategies and plans for greening the economy and achieving sustainable development. To do this, the Framework proposes a vision, objectives and focus areas that build on the policy effort that followed from the Rio+20 Conference outcomes and the 2030 Agenda for Sustainable Development, as well as on the knowledge base and good practices developed in the region.

11. To support the implementation of the Strategic Framework, an initiative on green economy is proposed for the period 2016–2030. The initiative will comprise voluntary commitments by interested countries and organizations, both public and private, in the form of green economy actions (see section D below and annex I).

<sup>1</sup> The pan-European region under the Environment for Europe Process covers the full membership of ECE, i.e., the 56 ECE member States.

<sup>2</sup> See the Astana Ministerial Declaration, “Save water, grow green!” (ECE/ASTANA.CONF/2011/2/Add.1), available from [www.unece.org/env/efe/Astana/documents.html](http://www.unece.org/env/efe/Astana/documents.html).

12. The transition to green economy will require enhanced cooperation among and within countries, as policy measures, including market-based instruments, deliver better results if implemented in a clear, predictable and coordinated manner. Cooperation also allows building on each other's knowledge, experience and good practices, and helps to engage more effectively the private sector and civil society, whose role and influence increasingly surmount national borders. By building on the knowledge base, policies and actions at both regional and national level, and by addressing key constituencies, the Strategic Framework will help to advance such cooperation.

13. The Strategic Framework is expected to serve environment ministers in initiating and sustaining discussions on the green economy transition in their national Government and, ultimately, in creating an interministerial policy process to bring forward such an agenda involving key constituencies, including the public at large and the private sector.

14. The implementation and monitoring of the Strategic Framework and the initiative, at both the regional and national levels, could be facilitated by existing intergovernmental policy platforms, namely the ECE Committee on Environmental Policy and the Environment for Europe ministerial process, supported by the Green Growth Knowledge Platform.<sup>3</sup>

### **C. Objectives and focus areas**

15. Three main objectives will be attained by greening the economy in the pan-European region:

- Objective I. Reduced environmental risks and ecological scarcities.
- Objective II. Enhanced economic progress.
- Objective III. Improved human well-being and social equity.

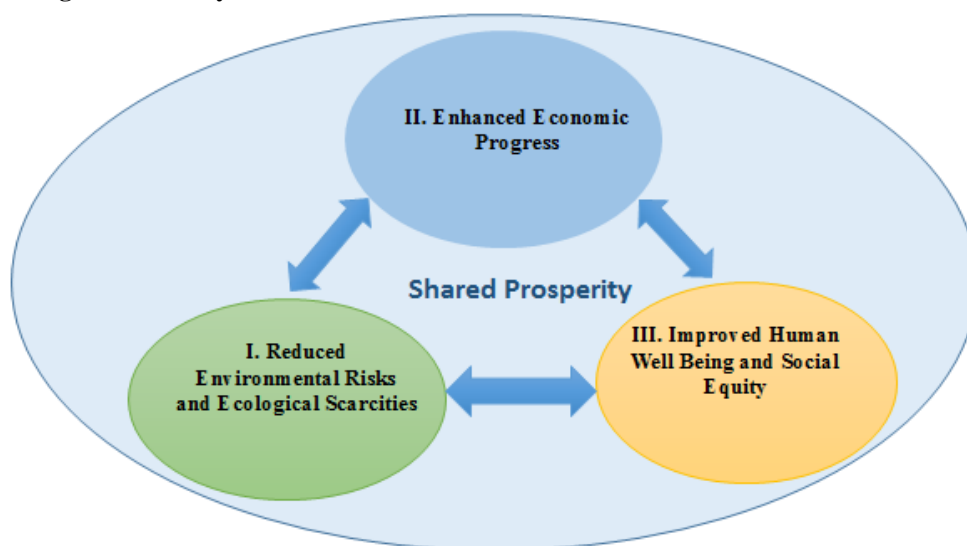

16. The objectives collectively foster prosperity, through economic progress that is environmentally sustainable and socially inclusive. This can be achieved by incentivizing and promoting investment and trade to support economic progress that is more equitable and decoupled from environmental degradation. It can be further achieved by encouraging consumers to change their habits in order to avoid overconsumption and prioritize green goods and services. The resulting maintenance of natural capital, ecosystems and their services will improve the quality of life and contribute to a shared prosperity, while the reduced environmental stress will decrease human health risks and increase well-being (see figure 1).

17. Nine integrated focus areas were identified indicating priorities for achieving the three objectives of the Strategic Framework.

---

<sup>3</sup> See [www.greengrowthknowledge.org/](http://www.greengrowthknowledge.org/).

Figure 1  
**The green economy in action**

**Objective I. Reduced environmental risks and ecological scarcities**

18. Natural capital — encompassing natural resource stocks and all living organisms from which ecosystem services are derived, as well as land and the ecosystems themselves — can be depleted if undervalued and mismanaged in economic activities. In an inclusive green economy, natural capital is properly valued and managed and thus maintained, ecological infrastructure is enhanced and biodiversity preserved, while externalities caused by economic activities and consumption of goods and services are internalized. The following three focus areas were identified with a view to prioritize the initiatives and actions necessary under this objective.

**Focus area 1. Improve sustainable use of natural capital**

19. Green economy allows for economic progress based on the use of the countries' natural capital (as part of inclusive wealth), provided that actions are taken to maintain or sustainably use that capital, including through transboundary cooperation. It encourages investments into technology, machinery and other solutions that help decouple economic progress from environmental degradation. It further informs and promotes behaviour, knowledge and solutions that help maintain natural capital and combat climate change and its impacts.

**Focus area 2. Enhance internalization of externalities that cause loss or damage to natural capital**

20. Green economy considers the cost of economic activities on natural capital (directly and indirectly) and takes actions to ensure that any loss or damage to natural capital is accounted for and internalized by setting the right price signals. Green economy penalizes pollution and in this way encourages investment to make economic activities less polluting. By introducing payments for ecosystem services, it further rewards and compensates those who restore and enhance ecosystems and their services.

**Focus area 3. Enhance ecological infrastructure**

21. Green economy values the services of ecosystems that can be recognized due to the functions they provide — for example, water purification, flood control and climate

stabilization by forests — as ecological infrastructure. It provides and informs regulations and incentives to restore and enhance the capacity of ecosystems to deliver their infrastructural functions, and to strengthen resilience to hazards and disasters, including those related to climate change.

## **Objective II. Enhanced economic progress**

22. Long-term prosperity can be put at risk if consumption, production and trade patterns are not sustainable. Green economy encourages consumers to shift towards sustainable consumption patterns, it incentivizes producers to innovate and invest in clean physical capital, products and services, and it promotes fair and green trade in support of sustainable consumption and production. The following three focus areas were identified with a view to prioritize the initiatives and actions necessary under this objective.

### **Focus area 4. Shift consumer behaviours towards sustainable consumption patterns**

23. Green economy encourages consumption as a driver of economic markets, but consumption patterns have to be sustainable and equitable. Green economy defines green services and products (labels and standards) and promotes shifting to sustainable lifestyles. It favours green procurement as well as consumer behaviour resulting in the efficient use of water, energy and materials, and the minimization of waste generation.

### **Focus area 5. Develop clean physical capital for sustainable production patterns**

24. Green economy strengthens clean and resource-efficient production processes and infrastructure through green knowledge and technology and introduces green products and services through the application of principles of reuse, repair, upgrade, remanufacture and recycle. It incentivizes a shift to clean technologies while penalizing those who do not make that shift. It encourages closed-loop material cycles and eco-design of products (circular economy approach) as well as resilience and low-carbon design of infrastructure. It promotes synergies between sectors and between economic activities aimed at curbing resource use (nexus approach). It facilitates access to capital for investment in research and innovation to improve clean technologies, products and services, including for small and medium enterprises, and encourages clean technology transfer.

### **Focus area 6. Promote green and fair trade**

25. Green economy ensures that traded products respect the requirements of green and fair trade. It also entails support for market transparency and development, and the simplification of regulations to facilitate access of locally-produced green goods to markets. It further reduces barriers to trade and investment that can place a brake on the development and diffusion of green technologies, while providing for the effective application of intellectual property rights (such that innovation is stimulated while at the same time technology transfer and access to innovation are secured).

## **Objective III. Improved human well-being and social equity**

26. Human well-being and social equity can be undermined if people cannot find employment, if they lack access to essential services or are unable to engage meaningfully in the decision-making that concerns them. The green economy helps to create decent and green employment, ensures and improves access to healthy living and well-being as well as encourages public participation and promotes education for sustainable development. The following three focus areas were identified with a view to prioritize the initiatives and actions necessary under this objective.

**Focus area 7. Increase green and decent jobs, while developing the necessary human capital**

27. Green economy helps to create green and decent jobs and ensures the necessary education and training for the workforce to develop skills needed for those jobs. It incentivizes the creation of incubators for green entrepreneurship. It develops opportunities for new green markets and jobs in these markets. It facilitates access to funds for training and retraining. It incentivizes green apprenticeship programmes for youth.

**Focus area 8. Improve access to services, healthy living and well-being**

28. Green economy supports healthy living and well-being, including for low-income and vulnerable groups. It promotes programmes and solutions allowing vulnerable groups to have access to essential services — for example, water and energy utilities, housing, transport and health services — and to use them in an efficient way. It establishes social protection floors to counterbalance the effects of the transition on vulnerable groups. It prioritizes urban spatial planning to ensure healthy living and well-being.

**Focus area 9. Promote public participation and education for sustainable development**

29. Green economy promotes access to information and public participation in decision-making as a prerequisite for meaningful green and sustainable governance. It ensures access to education for sustainable development that enables citizens to act responsibly vis-à-vis the environment and other people.

**D. Implementing the Strategic Framework**

30. Putting the Strategic Framework into practice involves mainstreaming the green economy approach into regional and national policies. In both cases, the transition to an inclusive green economy should adapt and incorporate nationally developed policies and strategies where possible, so as to avoid contradictions or duplication with other existing efforts.

31. At the national level, key drivers of implementation include clear leadership and communication, coordination across ministries and multi-stakeholder engagement, as the transition to a green economy entails numerous activities across multiple sectors. Engaging the private sector, civil society, local authorities and other relevant stakeholders is key to ensure ownership, private investment flows, establishment of partnerships and behavioural changes.

32. At the regional level, the strategic framework would anchor national efforts in a set of shared objectives and focus areas, as well as promote coordination in the implementation and monitoring of progress and the provision of technical assistance and capacity-building for countries.

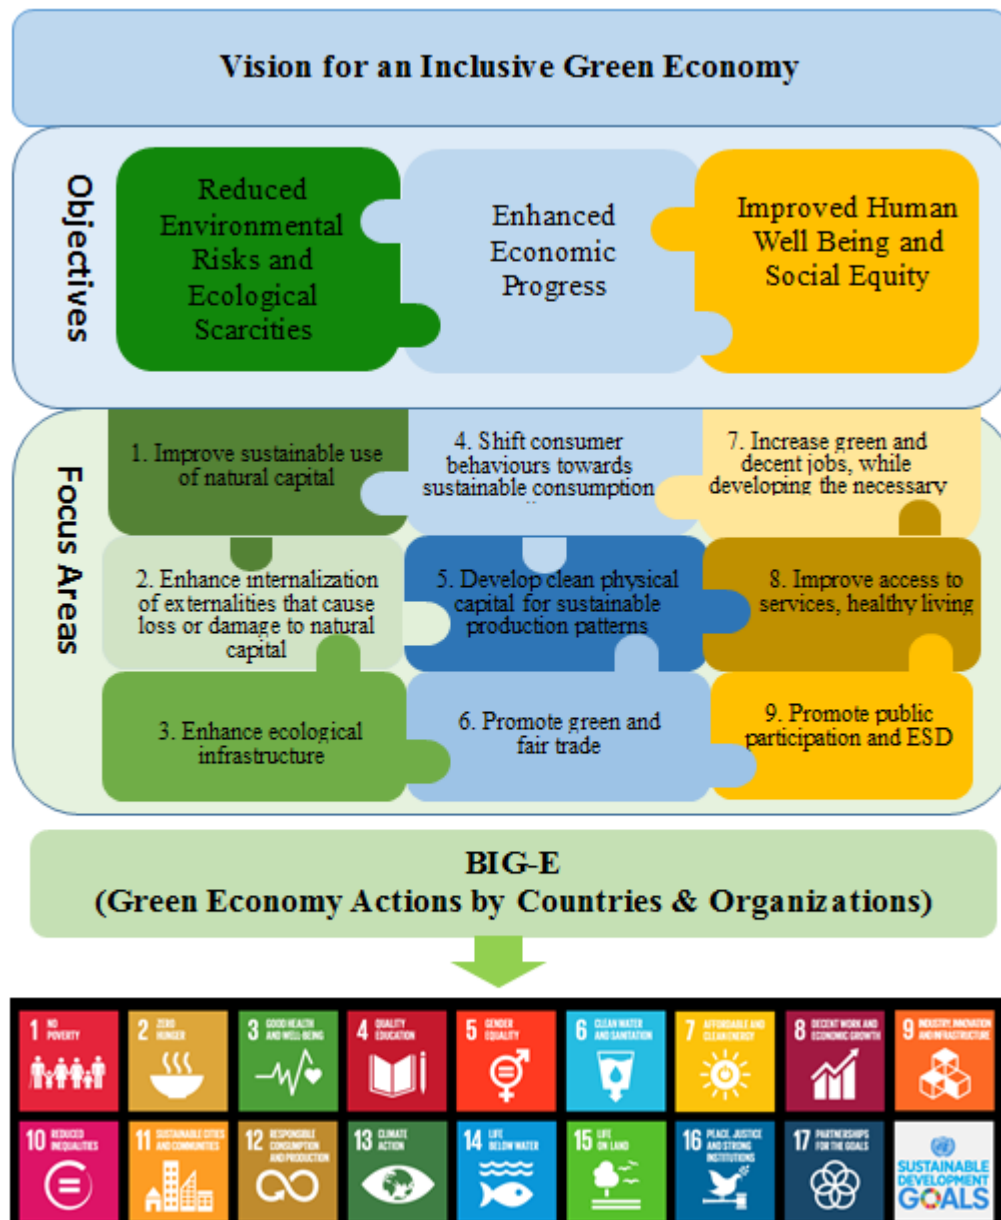

33. Transitioning to a green economy involves a mix of actions that reinforce economic progress and the maintenance of natural capital, ranging from policies targeted at incentivizing the efficient use of natural resources to approaches inclusive of the broader social values of sustainable development.

34. Under the Strategic Framework, a voluntary initiative on green economy is proposed with a view to support the implementation of the Framework during 2016–2030. The proposed title for the initiative is “Batumi Initiative on Green Economy” with the acronym BIG-E. The initiative will comprise voluntary commitments by interested countries and organizations, both public and private, in the form of green economy actions. The initiative is included in the annex to the Strategic Framework.

## E. Contributing to achieving the Sustainable Development Goals

35. Greening the economy, as an approach to foster economic progress while ensuring environmental sustainability and social equity, is considered to be a promising avenue towards sustainable development, and has the potential to support the 2030 Agenda for Sustainable Development.

Figure 2  
The Strategic Framework at a glance

36. The Strategic Framework leverages the substantial body of analysis and policy effort that flowed from the 1992 United Nations Conference on Environment and Development, and entails an operational agenda that can help countries in their efforts to achieve the commitments made at the Rio+20 Conference and the goals included in the 2030 Agenda

for Sustainable Development. Showing links between the Framework's objectives, focus areas and committed actions by the BIG-E stakeholders on the one hand, and the SDGs and their targets, on the other, provides countries with a clearer picture of possible avenues to advance the green transition while at the same time making progress on the aspects of the 2030 Agenda relevant to their development priorities (see figure 2).

37. Within the Strategic Framework, countries and organizations are invited to attribute their green economy actions under the BIG-E to the relevant SDG targets with a view to simultaneously contribute to the attainment of relevant SDGs and their targets.

## **F. Monitoring and review**

38. The transition to an inclusive green economy also entails reviewing progress in implementation. In line with the 2030 Agenda, the timeframe suggested for the review of progress in advancing the objectives of the Strategic Framework, through active implementation and monitoring its BIG-E commitments, is 2016–2030. The main implementing actors would be countries and organizations participating in BIG-E.

39. The first reporting on progress in BIG-E implementation could be in 2018 during the mid-term review of the Batumi Conference main outcomes at the Committee's annual session. The reporting by the BIG-E stakeholders could be carried out in a similar manner to the reporting under the Astana Water Action, i.e. by filling in a short template for reporting to be developed in consultation with the Bureau of the Committee.

40. Based on submitted responses, a progress report would be prepared for the Committee consideration in 2018. A second reporting exercise and a progress report could be prepared for the next EfE ministerial conference, subject to decision by the Committee. BIG-E could continue to be monitored every two and a half years until 2030, using the high-level platform of the EfE ministerial conferences and their mid-term reviews.

41. Figure 2 above provides a schematic view of the Strategic Framework, including its vision, objectives, focus areas, voluntary green economy initiatives and linkages to the SDGs targets.

## Annex

### Batumi Initiative on Green Economy

#### *Explanatory note*

This annex presents a revised approach to developing a green economy action. Originally, the list of actions annexed to the first draft strategic framework was intended to constitute the Batumi Green Economy Action. However, during the work on the revision of this list, it became clear that because green economy is much broader than, for instance, water (Astana Water Action) or air (Batumi Action for Cleaner Air), it was not practical to continue to attempt to produce a comprehensive list of actions to constitute the Batumi Green Economy Action in time for the Batumi Conference.

Therefore, the group of experts has proposed to the Committee to consider adapting the approach for preparing the Batumi Green Economy Action, using instead the expected commitments by interested countries and organizations. A different name for the Batumi Green Economy Action has also been recommended, with a view to make a better distinction between the adapted approach and the Batumi Action for Cleaner Air, for instance.

1. The Pan-European Strategic Framework for Greening the Economy is meant to inspire action and provide state-of-the-art advice for strategies and plans that aim at greening the economy, by building upon existing knowledge, policies and practices at the international, regional and national levels — for example, the Green Growth Knowledge Platform, the UNEP 10-year Framework of Programmes on Sustainable Consumption and Production and the UNEP International Resource Panel.<sup>4</sup>
2. The proposed initiative on green economy serves to make operational the Strategic Framework during 2016–2030. The suggested title for the initiative is “Batumi Initiative on Green Economy” with the acronym BIG-E. The initiative will comprise voluntary commitments by interested countries and organizations, both public and private (BIG-E stakeholders), in the form of green economy actions.
3. Countries and organizations are invited to identify and voluntarily commit green economy actions under one or several focus areas, for instance to incentivize green investments and trade or green consumption habits in order to advance the transition to an inclusive green economy. It is proposed that each BIG-E stakeholder commits about five green economy actions in time for the Batumi Ministerial Conference.
4. The committed actions will together constitute the BIG-E, which will be launched at the Batumi Environment for Europe Ministerial Conference. To harmonize the submission of actions, a template is included in appendix I to this annex.<sup>5</sup> Appendix II includes a fictional action as an example, which will be deleted from the final document submitted to the Conference.

<sup>4</sup> For more details please see [www.unep.org/resourcepanel](http://www.unep.org/resourcepanel).

<sup>5</sup> To facilitate its use, the template is included in an appendix at the suggestion of one member of the Bureau, for consideration by the Committee.

5. An important criterion for stakeholders in identifying, developing and committing green economy actions for BIG-E is whether they are expected to deliver economic benefits with environmental and social co-benefits. Other criteria are whether an action: includes a mixture of new and on-going actions; will make a clear contribution to achievement of SDG targets; will have a measurable impact over time; and will be a driver for transformation and innovation towards green economy and may be relevant to and inspire other countries in the region.

6. In order to simultaneously contribute to the 2030 Agenda for Sustainable Development (2030 Agenda), each green economy action that will constitute BIG-E should be linked to the specific SDG targets to which it also contributes.<sup>6</sup> Such an approach could help ensuring the advancement of green economy in the region in support of the 2030 Agenda.

7. The list of committed actions will be organized into BIG-E in accordance with the nine focus areas. Further, the actions will be tagged based on their scope, i.e. whether they are economy-wide or sectoral. In addition, since cities also play a key role in the green transition, actions that can help to make cities smarter, more resource efficient and inclusive will be tagged accordingly. A number of sectors were identified as priority for the green economy in the region: agriculture, forestry and fishing; energy and mining; manufacturing; transport; water; waste; tourism; and housing, buildings and construction (see figure 3 below).

8. At the same time, a green economy approach requires combining actions aimed at implementing the traditional command-and-control regulatory instruments, with actions aimed at introducing innovative tools, including collective public action to change the patterns of production and consumption, as well as market-based instruments to shift funding towards green investment, clean technology development and improved resource efficiency. The actions will be tagged according to the following types:

(a) **Legal, regulatory and policy instruments:** Includes actions to implement command-and-control regulatory instruments, to change the patterns of production and consumption, improve efficiency and promote trade of green products. Examples are green procurement legislation and mandatory standards, technology and efficiency requirements;

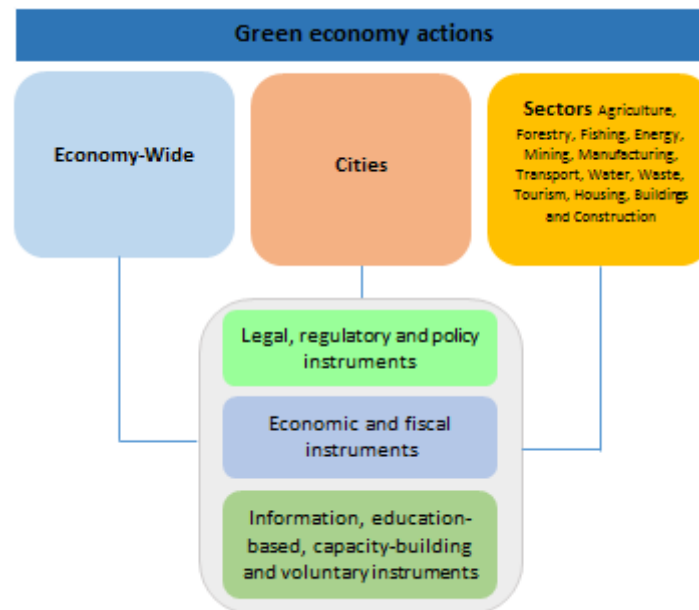

(b) **Economic and fiscal instruments:** Includes actions that are used to send or adjust price signals in support of a green economy transition. Common examples include environmental taxation, trading permits, subsidy reforms, extended producer responsibility systems, deposit-refund systems and payment for ecosystem services. This type of instrument also includes public expenditure efforts, such as financial support to green investments through soft loans, credit lines, publicly-backed guarantees and revolving funds;

(c) **Information, education-based, capacity-building and voluntary instruments,** often referred to as softer instruments: Includes actions aimed at driving behavioural changes, with the goal of making consumers and business pursue green options based on knowledge of the benefits and opportunities that can be achieved. They include voluntary certification and labelling schemes, as well as awareness raising campaigns, educational and capacity-building programmes, and knowledge and skills sharing, with a view to build the human capital for green economy.

---

<sup>6</sup> For the SDG targets, please refer to the Resolution adopted by the General Assembly on 25 September 2015 (A/RES/70/1) available at <https://sustainabledevelopment.un.org/post2015/summit>.

Figure 3  
Green economy actions at a glance

9. Green economy actions committed by countries and organizations would be made available on the Green Growth Knowledge Platform to provide user-friendly global access with a view to sharing good practices and experience.

10. BIG-E would be launched with a festive ceremony at the Batumi Ministerial Conference during the agenda item on greening the economy in the pan-European region. The ceremony would include the announcement of the voluntary commitments by the BIG-E stakeholders.

11. The proposed deadline to submit to the secretariat the green economy actions (by filling in the template included in appendix I below) is Monday, 9 May 2016. Additional actions could be included up until the Conference as well as after the Conference until the mid-term review in 2018 and beyond once later milestones have been decided by the Committee.

12. A list of possible green economy actions has been prepared by the group of experts in green economy with a view to inspire BIG-E stakeholders in identifying their actions. The list is based on existing national, regional and international instruments and sources. The possible actions are clustered in accordance with the nine focus areas, as well as by the scope and type mentioned above *(to include the reference to the list of possible actions, in accordance with the outcome of the Committee's special session)*.

## Appendix I

### Template for submitting voluntary commitments to the Batumi Initiative on Green Economy

The template below should be used to submit actions undertaken by countries and organizations, both private and public,<sup>7</sup> be included in and contribute to the Batumi Initiative on Green Economy (BIG-E).

Selection criteria to guide the identification of green economy actions are whether they: includes a mixture of new and on-going initiatives; are expected to deliver economic benefits with environmental and social co-benefits; will make a clear contribution to achievement of SDG targets; will have a measurable impact over time; and will be a driver for transformation and innovation towards green economy and may be relevant to and inspire other countries in the region.

For each action, please provide information on the following items.

1. Country or organization:
2. Title of the action (referencing in parenthesis the number of the related focus area(s) that the initiative will contribute to):
3. Description of the action:
4. Action's timeframe/milestones, as appropriate:
5. Type of action<sup>8</sup>:
6. Economic sectors<sup>9</sup>:
7. Reference instruments and sources, as appropriate:
8. Expected co-benefits and impact of the outcome:
9. SDGs target(s) that the action may contribute to implement:
10. Implementation of Environmental Performance Review (EPR) Recommendations, as appropriate:
11. Objectively verifiable indicators, as appropriate:
12. Partners:
13. Contact point:

---

<sup>7</sup> Organizations, both private and public, are invited to submit actions by completing the fields of the template, as appropriate.

<sup>8</sup> In accordance with the Strategic Framework, the following three types of actions are suggested: (a) legal, regulatory and policy instruments; (b) economy and fiscal instruments; and (c) information, education-based, capacity building and voluntary instruments. Countries and organizations will refer to any of these three types, as appropriate and relevant.

<sup>9</sup> In accordance with the Strategic Framework, the following three clusters of sectors are suggested: (a) economy-wide; (b) cities; and (c) sectors, including: agriculture, forestry, fishing, energy, mining, manufacturing, transport, water, waste, tourism and housing, buildings and construction.

## Appendix II<sup>10</sup>

### Batumi Initiative on Green Economy: action 1 by Country XY

1. **Country or organization:** Country XY
2. **Title of the action:** Sustainable Public Procurement Online Platform (FA.4 “Shift consumer behaviours towards sustainable consumption patterns”)
3. **Description of the action:** Establishment of an online platform that allows coordination among procurement stakeholders, including their training and exchange of information. The initiative will enable an assessment of different sustainability criteria and facilitate the dialogue on procurement with the private sector.
4. **Action’s timeframe/milestones, as appropriate:** Establishment of the online platform and initiating a dialogue before 2018. Assessment of sustainability criteria before 2020.
5. **Type of action:** Information, education-based, capacity building and voluntary instruments
6. **Economic sectors:** Economy-wide
7. **Reference instruments and sources, as appropriate:** UNEP 10-year framework of programmes on sustainable consumption and production
8. **Expected co-benefits and impact of the outcome:** increased use of Sustainable Public Procurement resulting in enhancing the resource efficiency, developing human capital and creating green jobs
9. **SDGs target(s) that the action may contribute to implement:** Action contributes to SDG target 12.7 “Promote public procurement practices that are sustainable, in accordance with national policies and priorities”
10. **Implementation of EPR Recommendations, as appropriate:** *[to complete based on the latest EPR for country XY conducted by ECE or OECD]*
11. **Objectively verifiable indicators, as appropriate:** Number of active platform users, number of assessments conducted through the platform
12. **Partner(s):** Ministry of Finance; Ministry for Procurement Ministry of the Environment
13. **Contact point:** (a) UNECE Committee on Environmental Policy representative from Country XY; (b) Expert in Country XY

---

<sup>10</sup> This appendix is included as an example to facilitate the work of the Committee at its special session. It will be removed from the final document submitted to the Conference.
